Companies Founded

AI/ML technical lead and architect who owns the end-to-end technical vision and ships it. 13+ years leading architecture for systems used by 10M+ users, much of it on AWS. Through my practice, Anand Creations, I embed with customer and partner teams, set reference architectures and reusable patterns, and counsel executives on the trade-offs that matter (total cost of ownership, time-to-value, build vs buy). Deep in agentic AI: multi-agent orchestration with supervisor-worker hierarchies, ReAct and self-reflection; knowledge-graph and RAG data architectures; plus the eval pipelines, observability and guardrails that make it production-grade. MBA-trained, comfortable framing technical rigor as business value for VP+ audiences.

WORK EXPERIENCE

LumApps · Senior AI Engineer

03/2026 - Present

Multi-Agent Orchestration Agentic AI GCP LangGraph Google ADK MCP RAG Knowledge Graphs Vector Databases
Neo4j Graphiti Evaluation Pipelines Observability Enterprise Architecture Python

- Architected and shipped production multi-agent systems using supervisor-worker hierarchies, ReAct, self-reflection and hierarchical delegation, with tools over MCP servers plus the observability, tracing and guardrails to run them safely. 2x open rates, 2x approved opportunities; forecast \$1M in quarterly revenue.
- Designed AI Brain, a knowledge-graph and RAG data architecture (temporal graph on Graphiti and Neo4j, event-driven ingest over Pub/Sub) unifying 5+ enterprise silos (Salesforce, HubSpot, Pendo, conversations, product usage) into one governed, time-aware context layer for every agent.
- Led technical discovery through production and counseled C-level on architecture trade-offs: reference patterns, eval pipelines, and cost-per-request instrumentation for total cost of ownership.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

AWS Kubernetes Kafka PostgreSQL Elastic Search ClickHouse Enterprise Architecture Data Platforms Java Python
TypeScript LangChain OpenAI Claude GitHub Actions

- Owned end-to-end architecture for multiple products used by 10M+ frontline users on AWS and Kubernetes. Set reusable patterns and technical standards across teams: robust, modular, and performant by design.
- Designed a distributed templating engine and led a 3-team search platform revamp (indexing and ranking) over a data stack of Kafka, PostgreSQL, Elastic Search and ClickHouse. Cut customer setup time 90%; powers 15% of all platform assets.
- Replaced \$337K in annual vendor cost with an in-house LLM pipeline in 6 weeks, with evaluation gates. 12K+ assets translated; product team iterates without external gatekeepers.
- Hired, mentored and coached the AI engineering cohort (deputy tech lead of FUEL). Grew engineers who now lead independently and raised the technical bar across teams.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Executive Advisory Technical Due Diligence AI Strategy Enterprise Architecture Scalability

- Counseled founders and engineering teams across 20+ startups on architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Advised portfolio companies on AI strategy, technical hiring, and engineering cultures that ship; mentored Opt Alpha on scaling high-frequency trading systems in production.

Dronistics · Founding Engineer

08/2018 - 03/2020

AWS Terraform Infrastructure as Code CI/CD Docker PostgreSQL Java Vue Real-time Systems

- Shipped an end-to-end autonomous delivery platform on AWS with real-time flight control APIs and logistics optimization. 500+ deliveries, 40% faster, 99.5% safety record, zero incidents.
- Built the cloud infrastructure and CI/CD from scratch. Enterprise-grade reliability that enabled partnerships with Unilever and a showcase at CES Las Vegas.

AWS

Machine Learning

Python

C++

Genetic Algorithms

Neural Networks

Distributed Computing

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and neural controllers via genetic algorithms. Machine learning where morphology and control evolve together.
- Migrated the simulation pipeline to AWS for large-scale parallel evolution runs impractical on local hardware. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.
- Teaching Assistant for Evolutionary Robotics at EPFL. Supervised 20+ master's students through hands-on ML projects in genetic algorithms and neural controllers.

ENTREPRENEURIAL PROJECTS

Founder & Principal Forward Deployed Engineer

Independent practice: I embed with customer and partner teams, run technical discovery, and ship production agentic AI in their environment, then distill repeatable field patterns into reusable modules and reference architectures. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a knowledge-graph memory (Graphiti on Neo4j) unifying 5+ enterprise silos into one time-aware layer every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.

Co-Founder & Technical Lead

AI-native cross-border tax and regulatory compliance platform, compliance-first for a regulated domain. A RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions with citations back to source regulation; agents flag regulatory risk before users act, with guardrails built before features. Zero-to-MVP in 3 months.

Founder & Builder

Real-time market intelligence where a multi-agent system generates signals alongside the evidence chain that justifies them, with model explainability and evaluation built in from day one. Core principle: if the model can't explain the output, it doesn't ship.
