Companies Founded

Applied AI architect who takes enterprises from discovery to LLMs in production, and who builds on Claude every day. 13+ years shipping software, now embedding with teams to design scalable architectures, develop evals, and integrate AI into a live enterprise stack. I translate between engineers and C-suite (MBA), and I run to safety and reliability, not just demos: my rule is that if the model can't explain its output, it doesn't ship, with human-in-the-loop checkpoints and guardrails built in. At LumApps my agent deployments 2x conversions and forecast \$1M in quarterly revenue; at Beekeeper I replaced \$337K in cost with an LLM pipeline gated by evals.

WORK EXPERIENCE

LumApps · Senior AI Engineer

03/2026 - Present

Claude Anthropic API LLM Solutions Evals Solution Architecture RAG Multi-Agent Systems Enterprise Integration Python GCP

- Guided use cases from discovery to production: designed the architecture, built the agents (Claude and OpenAI), and stood up eval frameworks to measure performance before rollout. 2x conversions, forecast \$1M in quarterly revenue.
- Designed a scalable AI architecture (knowledge-graph retrieval) and integrated it across 5+ enterprise systems (Salesforce, HubSpot, Pendo, product usage).
- Translated requirements between engineering and C-suite, and fed integration patterns back into product strategy.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Claude OpenAI LangChain Evals Enterprise Integration Salesforce Python Java AWS Kubernetes Technical Enablement

- Replaced \$337K in annual vendor cost with an in-house LLM pipeline gated by evaluation frameworks that measured quality before anything shipped. Evals as the release gate.
- Built customer-facing LLM products on Claude and OpenAI (AI Onboarding Specialist, GenAI demo system) integrated with Salesforce and live enterprise data.
- Created technical content and demos across audiences, from engineering deep dives to executive value conversations, that accelerated sales cycles.
- Hired and mentored the AI engineering cohort; helping others build with LLMs is the part I care about most.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Technical Advisory Technical Discovery AI Readiness Stakeholder Management Mentoring

- Served as trusted technical advisor across 20+ companies: technical discovery, architecture, and AI readiness with founders, engineers, and investors.
- Advised on AI strategy and coordinated across stakeholders to move complex technical decisions forward.

Dronistics · Founding Engineer

08/2018 - 03/2020

Cloud Architecture AWS APIs Enterprise Integration Python Java

- Designed and shipped a scalable cloud architecture on AWS with real-time APIs and enterprise integrations. 500+ deliveries, 99.5% safety record, zero incidents.
- Built reliability that partners trusted: partnerships with Unilever and a showcase at CES Las Vegas.

EPFL, Laboratory of Intelligent Systems (Robogen) · Research Engineer

08/2016 - 07/2018

Machine Learning AWS Python C++ Teaching

- Built Robogen, an open-source ML platform, and scaled it on AWS. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.
- Teaching Assistant: taught 20+ master's students hands-on. A genuine love of teaching and helping others succeed.

ENTREPRENEURIAL PROJECTS

Founder & Principal Architect

Independent practice: I embed with a customer's team, run technical discovery, and take AI from prototype to production, designing scalable architectures and evals and integrating into their existing stack. Flagship: the GTM AI Brain, a knowledge-graph retrieval layer every agent shares.

- Distill each engagement into reusable architectures, eval frameworks, and integration patterns, then write and speak about them so other builders adopt what works.

Founder & Builder

Real-time market intelligence where a multi-agent system generates signals alongside the evidence chain that justifies them, with explainability and evaluation built in from day one. Core principle, aligned with interpretable AI: if the model can't explain its output, it doesn't ship. Live retail users.

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform. RAG-grounded assistant answers regulatory questions with citations back to the source; compliance-first design with guardrails built before features. Safe, reliable AI in a regulated domain.
