\$4M

Quarterly Pipeline (AI Agent)

\$337K

Costs Eliminated

10M+

Users Served

3

Companies Founded

Lead AI engineer who ships production multi-agent systems that move company metrics. I run Anand Creations, a forward deployed engineering practice, and am currently deployed at LumApps building agents on LangGraph, Google ADK and GCP Vertex AI, forecast to generate \$4M in approved opportunities per quarter. 13+ years building software for millions: LLM pipelines that eliminated \$337K in vendor cost at Beekeeper, autonomous drone deliveries at Dronistics, co-evolution of robot brains and bodies at EPFL. Architect, builder, and tech lead in one. Verification-first by instinct: if the model cannot explain the output, it does not ship. Founded 3 companies on the side.

WORK EXPERIENCE

LumApps · Senior AI Engineer

03/2026 - Present

Python TypeScript GCP Vertex AI LangChain LangGraph Google ADK MCP AG-UI FastAPI Multi-Agent Systems ReAct RAG Vector Databases Evaluation Pipelines Observability Neo4j Graphiti Salesforce

- Built and deployed production multi-agent workflows for outbound sales on Python, LangGraph and Google ADK over GCP Vertex AI, using ReAct, self-reflection and hierarchical delegation, with tools exposed over MCP servers and agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast: \$4M in approved opportunities per quarter; at 25% conversion, \$1M in quarterly revenue.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes. Event-driven ingest over Pub/Sub, a per-agent query and write-back contract, and a freshness layer, grounding RAG retrieval to cut hallucinations.
- Led technical discovery through production: agent runtime, eval pipelines, conversation-level tracing and tool-selection tuning, cost-per-request instrumentation across microservices. LumApps is a client engagement of my practice, Anand Creations; reports directly to C-level on outcomes.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Java Python TypeScript Vue Kubernetes AWS OpenAI Claude LangChain CrewAI Strands Agents Langfuse Kafka PostgreSQL Elastic Search ClickHouse GitHub Actions

- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks (GitHub Actions + OpenAI). 12K+ assets translated, product team now iterates without external gatekeepers.
- Built AI Onboarding Specialist giving every new signup personalized, high-touch guidance at scale. 100% of customers guided through setup without adding headcount.
- Architected Employee Referral System end-to-end. Top revenue channel on the platform (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA.
- Built and mentored the AI engineering cohort. Hired for craft and curiosity, grew engineers who now lead features independently.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

AI Strategy Startup Evaluation Technical Mentoring Scalability Algorithmic Trading

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.

Dronistics · Founding Engineer

08/2018 - 03/2020

Vue Java PostgreSQL AWS Docker Terraform Infrastructure as Code CI/CD Real-time Systems Flight Control APIs

- Shipped end-to-end autonomous delivery platform (Vue, Java, PostgreSQL, AWS) with real-time flight control APIs and logistics optimization. 500+ deliveries, 40% faster, 99.5% safety record, zero incidents.
- Built cloud infrastructure and CI/CD pipeline from scratch. Enterprise-grade reliability that enabled partnerships with Unilever and a CES showcase.

C++PythonAWSGenetic AlgorithmsNeural NetworksEvolutionary AIRoboticsWebots

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and brains via genetic algorithms. Morphology and neural control evolved together through artificial selection.
- Migrated the simulation pipeline to AWS for large-scale parallel evolution runs impractical on local hardware. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.

ENTREPRENEURIAL PROJECTS

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>

06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: I embed with a customer's team, run technical discovery, and ship production agentic AI inside their environment, from a one-week AI Opportunity Assessment through evals, tracing, and rollout. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a temporal knowledge graph (Graphiti on Neo4j) unifying 5+ silos into one time-aware memory every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.
- Take prototypes to production for clients end to end: multi-agent systems, MCP tool servers, RAG grounding, eval pipelines, and observability, plus reusable modules distilled from repeatable field patterns.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>

05/2025 - Present

Founder & Builder

AI agents that generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model cannot explain the signal, it does not ship. Built the full stack solo (agent runtime, real-time market integrations, signal and justification layer, web frontend); live retail users after self-validating on my own portfolio.

SwissNRI - Cross-border Fintech Platform · <https://www.swissnri.com>

01/2024 - Present

Co-Founder & Technical Lead

First platform for Swiss-Indian families navigating FEMA, DTAA and Swiss regulations, replacing spreadsheets and expensive advisors. Compliance-first design: regulatory guardrails for both jurisdictions built before features. Zero-to-MVP in 3 months; feedback-driven iteration drove a 40% uplift in satisfaction.
