Dear Hoshii team,

I already work the way this role asks: own the problem end to end, ship fast, and stay on the hook once it is live.

At LumApps I own AI agent delivery from discovery through production and on-call: multi-agent workflows on LangGraph and Google ADK that read from Salesforce and HubSpot, draft the next action, and post clean data back into the systems of record, the same shape as the order-to-cash workflow Hoshii automates. Result: 2x open rates, 2x approved opportunities, \$1M forecast in quarterly revenue. Before that at Beekeeper I replaced a \$337K annual vendor contract with an LLM pipeline I designed and shipped in 6 weeks, prototype to production, then kept it running. On the side I run Anand Creations, my own forward deployed practice and the home for the AI products I build and ship myself, so the PoC-to-production motion is a habit, not a stretch.

I have the you-build-it-you-run-it instinct built in, not bolted on. At Beekeeper I ran observability and on-call for systems I architected, used by 10M+ users, because shipping and owning are the same job to me. My MBA and years co-owning GTM with Sales and Product also mean I show up to a discovery call listening for the actual workflow pain, not just the stated requirement, and I ship the 20% that unblocks it instead of gold-plating the rest.

I am Zurich-based, comfortable on-site with customers, and want to be the person your customers call when something breaks, because I built it. I would welcome the chance to talk.

Thanks for reading,

Anand Bhaskaran
