

\$1.5M+	\$337K	10M+	3
Revenue Shipped	Costs Eliminated	Users Served	Companies Founded

AI agents solutions architect who has deployed production agentic systems used by real customers, not demos. Through my practice, Anand Creations, I own the full arc solo: discovery, architecture, build, deploy, optimize, designing for the failure modes of autonomous workflows with human-in-the-loop oversight, evaluation gates, guardrails, and auditability. Finance and regulated fintech is home turf: a compliance-first cross-border tax platform (SwissNRI), an explainable trading-signal system (PulseView), a high-frequency trading team I mentored (Opt Alpha), and product ownership at an investment-research fintech (Obermatt). Built on Claude and Anthropic APIs, Python orchestration, MCP agent coordination, and knowledge-graph and RAG pipelines.

WORK EXPERIENCE

LumApps · Senior AI Engineer

03/2026 - Present

Agentic AI

Multi-Agent Orchestration

LLM Orchestration

Claude

Anthropic API

OpenAI

Python

MCP

LangGraph

RAG

Knowledge Graphs

Evaluation Pipelines

Guardrails

Observability

- Designed, deployed and scaled production multi-agent systems used daily by real teams, on Python with Claude and OpenAI, using ReAct, self-reflection and hierarchical delegation, with tools coordinated over MCP servers. 2x open rates, 2x approved opportunities; forecast \$1M in quarterly revenue.
- Built AI Brain, an integration layer that connects 5+ internal and external systems (Salesforce, HubSpot, Pendo, conversation data, product usage) into unified automated workflows via a knowledge-graph and RAG pipeline (Graphiti on Neo4j, event-driven ingest over Pub/Sub).
- Owned AI governance in production: evaluation pipelines, conversation-level tracing, tool-selection tuning, cost-per-request instrumentation, and human oversight designed in, not bolted on.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Python

Claude

OpenAI

LangChain

Systems Integration

Salesforce

AWS

Kubernetes

Kafka

PostgreSQL

ClickHouse

GitHub Actions

Java

- Replaced \$337K in annual vendor cost with a production LLM automation pipeline built in 6 weeks, with evaluation gates so every output was checked before it shipped. 12K+ assets processed; no external gatekeepers.
- Built a GenAI system that integrates Salesforce and live customer data into automated, personalized workflows: the connective tissue between AI and existing systems of record.
- Built AI Onboarding Specialist, a production agent that gives every new signup high-touch guided setup at scale, with zero added headcount.
- Hired and mentored the AI engineering cohort and shipped a distributed templating engine (reusable frameworks now powering 15% of all platform assets) so teams build safely without a single specialist.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Algorithmic Trading

FinTech

Technical Due Diligence

AI Strategy

Systems Architecture

- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production: high-stakes, low-latency finance workloads where failure is expensive.
- Ran technical due diligence on 20+ startups (architecture, scalability, AI readiness) to inform seed-to-VC investment decisions.

Obermatt · Technical Product Manager (Concurrent)

07/2018 - 01/2021

FinTech

Financial Data

Product Ownership

Requirements to Roadmap

Docker

CI/CD

- Translated finance and business requirements into technical roadmaps for the investment-analysis platform; improved customer satisfaction and retention.
- Directed a remote engineering team, introduced agile (20% productivity gain), and improved CI/CD with Docker (30% faster deployments).

AWS

Python

Java

PostgreSQL

CI/CD

Real-time Systems

Systems Architecture

- Shipped an end-to-end platform on AWS with real-time APIs and logistics optimization, from discovery to build to deployment without external consultants. 500+ deliveries, 99.5% safety record, zero incidents.
- Built the cloud infrastructure and CI/CD from scratch. Reliability that earned partnerships with Unilever and a showcase at CES Las Vegas.

AWS

Machine Learning

Python

C++

Genetic Algorithms

Neural Networks

- Engineered Robogen and migrated the simulation pipeline to AWS for large-scale parallel runs. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.
- Foundational AI experience (optimization, search, learning from environment) that informs how I reason about autonomous agent behavior and its failure modes today.

ENTREPRENEURIAL PROJECTS

Founder & Principal Solutions Architect

Independent practice: I embed with a team, run discovery, and ship production agentic AI end to end, then distill repeatable patterns into reusable modules, workflow templates, and guardrails so non-specialists can build on top.

- Flagship engagement, the GTM AI Brain: a knowledge-graph memory (Graphiti on Neo4j) unifying 5+ business systems into one governed, time-aware layer every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.

Co-Founder & Technical Lead

AI-native cross-border tax and regulatory compliance platform, compliance-first for a regulated domain. A RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions with citations back to source regulation; agents enforce guardrails and flag regulatory risk before users act. Zero-to-MVP in 3 months.

Founder & Builder

Real-time market intelligence where a multi-agent system generates financial trading signals alongside the evidence chain that justifies them, with model explainability and evaluation gates built in. Core principle: if the model can't explain the signal, it doesn't ship. Live retail users on real-time feeds.

EDUCATION

Quantic School of Business and Technology

2019 - 2020

MBA Business Administration

EIT Digital

2014 - 2016

Master (Programme) Innovation & Entrepreneurship

Eindhoven University of Technology (TU/e)

2015 - 2016

MSc (Netherlands) Embedded Networking

KTH Royal Institute of Technology

2014 - 2015

MSc (Sweden) Embedded Systems

Amrita Vishwa Vidyapeetham

2010 - 2014

Bachelor of Engineering Electronics and Communication

CERTIFICATES

Build LLM Apps with LangChain

DeepLearning.AI

Building Modern Java Applications

AWS

Microsoft Certified Professional (MCPS)

Microsoft

MongoDB for Java Developers

MongoDB University

AWARDS

Appreciation from John T. Chambers (ex-CEO, Cisco Systems)

Cisco Systems

Recognized for contributions to strategic projects within Cisco's ecosystem

AWS Cloud Credits for Research

Amazon Web Services (2020)

TI India Analog Design Contest Winner

Texas Instruments

KTH Opportunities Fund

KTH Royal Institute of Technology
