Costs Eliminated

Founder-builder and technical storyteller who ships developer-facing products and gets developers to adopt them. 13+ years shipping software, now building in the agent-native era: MCP servers, structured retrieval over knowledge graphs, and agent tooling, with the platform to explain it (keynotes at Developer Week and Front Conference plus a steady stream of tutorials and technical writing). Zero-to-one is my default: founding engineer at Dronistics, three companies founded, and reusable developer tooling at Beekeeper that powers 15% of all platform assets. Fintech is familiar ground (trading, cross-border compliance, investment research), and I engage engineers as a peer: I read the OpenAPI spec, ship the reference implementation, then write the launch post.

WORK EXPERIENCE

LumApps · Senior AI Engineer

03/2026 - Present

MCP Agent-Native Interfaces AG-UI Structured Retrieval RAG APIs Multi-Agent Systems Python TypeScript LangGraph Knowledge Graphs GCP

- Built agent-native interfaces in production: multi-agent workflows with tools exposed over MCP servers and agent state streamed to the UI over AG-UI. The exact 'how do agents discover, retrieve, and act' problem this role is about.
- Designed AI Brain, structured retrieval over a knowledge graph (Graphiti on Neo4j) so agents pull the right context on demand. Where retrieval beats keyword search.
- Owned it end to end and reported outcomes to C-level: 2x conversions, forecast \$1M in quarterly revenue, with eval pipelines and cost-per-request telemetry.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Developer Tooling APIs Microfrontends Module Federation Launch Strategy Java Python TypeScript Vue GitHub Actions OpenAI LangChain

- Built a distributed templating engine and reusable module framework now powering 15% of all assets created on the platform (10M+ users): developer tooling that made the product easy to build on.
- Led a microfrontends and module-federation architecture so teams shipped independently against shared interfaces. Practical developer experience at scale.
- Co-owned GTM launches with Product and Sales, each shipped with instrumentation so we knew within a week if it moved the metric. Launch strategy tied to adoption, not awareness.
- Hired and mentored the AI engineering cohort; the reference for how new engineers ramped and shipped independently.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Developer Community Technical Mentoring AI Strategy FinTech Public Speaking

- Mentored 20+ startup teams through technical discovery on architecture, scalability, and AI readiness. Meeting builders where they are and unblocking them.
- Advised on AI strategy and engineering culture; mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.

Dronistics · Founding Engineer

08/2018 - 03/2020

APIs Zero-to-One AWS Python Java CI/CD Real-time Systems

- Zero-to-one build: shipped the platform, real-time APIs, and integration points from scratch. 500+ deliveries, partnerships with Unilever, and a showcase at CES Las Vegas.
- Built the cloud infrastructure and CI/CD from scratch. Reliability that partners could integrate against with confidence.

Open SourceDeveloper EducationTechnical WritingPythonC++AWS

- Engineered Robogen, an open-source platform adopted by researchers and students worldwide. Work featured on the AWS Public Sector Blog: technical storytelling that reached a broad developer and research audience.
- Teaching Assistant for Evolutionary Robotics: taught 20+ master's students hands-on. Turning a complex platform into something people could build with.

ENTREPRENEURIAL PROJECTS

Anand Creations - Agentic AI Practice & Developer Content · <https://anand-creations.com>

06/2024 - Present

Founder & Principal Engineer

Independent practice where I ship agentic products and the developer surface around them: MCP tool servers, reusable modules, and reference implementations, plus public case studies and tutorials that teach others how to build. Flagship: the GTM AI Brain, a knowledge-graph retrieval layer every agent reads and writes.

- Publish developer-facing writing and case studies (agent architecture, the AI brain layer, ReAct from scratch) that turn hard-won production lessons into content other builders use.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>

05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. I built the full stack solo, from agent runtime and real-time market integrations to the web frontend, then shipped it to live users. A developer product taken zero-to-one, alone.

SwissNRI - Cross-border Fintech Platform · <https://www.swissnri.com>

01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions with citations back to the regulation; compliance-first design with guardrails built before features. Zero-to-MVP in 3 months.
