Companies Founded

Full-stack developer who ships both the UI and the data layer underneath it: Python and TypeScript on the backend, Vue on the front, PostgreSQL and Elastic Search for storage and search. I integrate LLMs into production applications as a matter of course: AI Brain at LumApps is a metadata and knowledge layer unifying 5+ data sources with access contracts and freshness governance built in, the same data lifecycle problem a metadata management platform solves. At Beekeeper I designed and shipped REST APIs and full-stack features end to end (Employee Referral System, Distributed Templating Engine) for 10M+ users in an Agile team, with CI/CD via GitHub Actions and Jenkins. 13+ years building user-facing tools that data teams and business users both rely on daily.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python · TypeScript · LangChain · LangGraph · Google ADK · GCP · Vertex AI · MCP · RAG · Multi-Agent Systems
Evaluation Pipelines · FastAPI · Neo4j · Graphiti · Salesforce

- Designed AI Brain, a metadata and knowledge management layer (temporal knowledge graph on Graphiti and Neo4j) unifying 5+ data sources (Salesforce, HubSpot, Pendo, conversation transcripts, product usage), with a per-source access contract and a freshness layer that flags stale data, the same lifecycle and interoperability problem a metadata management platform solves.
- Built and deployed production multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI, integrating LLMs directly into a customer-facing application with tools exposed over MCP servers. 2x open rates, 2x approved opportunities. Forecast: \$1M in quarterly revenue at 25% conversion.
- Led technical discovery through production: agent architecture, eval pipelines, tracing, tool-selection tuning, and cost-per-request instrumentation, evaluating and adopting new AI techniques as the field moved.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Python · TypeScript · Java · Vue · PostgreSQL · Elastic Search · REST APIs · Agile · CI/CD · GitHub Actions · Jenkins
Kubernetes · AWS · OpenAI · LangChain · Kafka · ClickHouse · Observability

- Architected Employee Referral System end-to-end: Vue frontend, Java and PostgreSQL backend, REST APIs. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA.
- Designed distributed templating engine that cut customer setup time 90% and now powers 15% of all platform assets for 10M+ users. Full-stack ownership, front to back, with user experience as the design constraint.
- Led Search Platform revamp across 3 teams on Elastic Search: redesigned indexing and ranking to surface what users mean to find, not just what they typed. Measurable lift in user engagement.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline (GitHub Actions CI/CD, OpenAI APIs) built in 6 weeks. 12K+ assets translated, product team now iterates without external gatekeepers.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

AI Strategy · Technical Evaluation · Startup Evaluation · Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Advised multiple portfolio companies on technical hiring, AI strategy, and building engineering cultures that actually ship.

Dronistics · Founding Engineer

08/2018 - 03/2020

Vue · Java · PostgreSQL · REST APIs · AWS · Docker · CI/CD · Real-time Systems

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live UX test for real-world systems.
- Engineered real-time flight control REST APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: I embed with a customer's team, run technical discovery, and ship production agentic AI inside their environment, from a one-week AI Opportunity Assessment through evals, tracing, and rollout. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a temporal knowledge graph (Graphiti on Neo4j) unifying 5+ silos into one time-aware memory every agent reads and writes, with event-driven ingest and a per-agent query and write-back contract.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file, with access and regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

EDUCATION	CERTIFICATES	AWARDS
Quantic School of Business and Technology2019 - 2020 MBA Business Administration	Knowledge Graphs for RAGNeo4j	Appreciation from John T. Chambers (ex-CEO, Cisco Systems) Cisco Systems Recognized for contributions to strategic projects within Cisco's ecosystem
EIT Digital2014 - 2016 Master (Programme) Innovation & Entrepreneurship	AI Agents in LangGraphLangChain & Tavily	AWS Cloud Credits for Research Amazon Web Services (2020)
Eindhoven University of Technology (TU/e)2015 - 2016 MSc (Netherlands) Embedded Networking	Build LLM Apps with LangChainDeepLearning.AI	
KTH Royal Institute of Technology2014 - 2015 MSc (Sweden) Embedded Systems	Building Modern Java ApplicationsAWS	
Amrita Vishwa Vidyapeetham2010 - 2014 Bachelor of Engineering Electronics and Communication
