Companies Founded

Forward deployed engineer who already runs this exact model: I founded Anand Creations to embed inside customer environments and ship production agentic AI from discovery to go-live, no handoff. Currently embedded at LumApps, I lead technical delivery end-to-end: agent architecture, prompts, tool calls, and integration with Salesforce, HubSpot, Pendo, and product data, shipping a system that doubles outbound conversions and forecasts \$1M in quarterly revenue. At Beekeeper I led complex technical deliveries as Tech Lead, replaced a \$337K vendor contract with an in-house LLM pipeline in 6 weeks, and mentored the AI engineering cohort into engineers who now lead features independently. Fluent across Python, TypeScript, and Java, with 13+ years shipping production systems for 10M+ users.

WORK EXPERIENCE

LumApps · Lead AI Engineer, GTM

03/2026 - Present

Python · TypeScript · LangChain · LangGraph · Google ADK · GCP · Vertex AI · RAG · MCP · AG-UI · Multi-Agent Systems · Evaluation Pipelines · LangSmith · Observability · FastAPI · Neo4j · Graphiti · On-Call · Salesforce

- Built and deployed production multi-agent workflows for outbound sales on Python, LangGraph and Google ADK over GCP Vertex AI, grounded in Salesforce CRM data as the base data source, with agent intelligence design, prompts, reasoning, and tool calls exposed over MCP servers, agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast: \$4M in approved opportunities per quarter; at 25% conversion, \$1M in quarterly revenue.
- Built and integrated a data pipeline unifying 5+ customer data sources (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into AI Brain, a temporal knowledge graph on Graphiti and Neo4j with event-driven ingest over Pub/Sub and a per-agent query and write-back contract, grounding RAG retrieval to cut hallucinations.
- Led technical discovery through production: agent architecture, eval pipelines, agent tracing (LangSmith), tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems. Reports directly to C-level on outcomes, not progress.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Python · TypeScript · Java · Snowflake · BigQuery · Looker · PostgreSQL · Vue · Kubernetes · AWS · OpenAI · LangChain · Kafka · Elastic Search · ClickHouse · Jenkins · GitHub Actions · Observability · Grafana · Datadog · Logz.io · On-Call

- Architected Employee Referral System end-to-end as Tech Lead reporting to CIO. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA because customer trust is measured in uptime.
- Built customer-facing analytics dashboards on Snowflake, BigQuery, and Looker, giving org admins direct visibility into their own organization's usage and engagement data, the same deployment-health and business-outcome reporting a customer-facing agent rollout needs.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks, from proof of concept to production. 12K+ assets translated, product team now iterates without external gatekeepers.
- Built and mentored the AI engineering cohort. Hired for craft and curiosity, grew engineers who now lead features independently.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

AI Strategy · Startup Evaluation · Technical Mentoring · Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Advised multiple portfolio companies on technical hiring, AI strategy, and building engineering cultures that actually ship.

Dronistics · Founding Engineer

08/2018 - 03/2020

Python · Java · PostgreSQL · Vue · AWS · Docker · Real-time Systems · APIs

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live UX test for autonomous systems in the real world.
- Built reliability in from day one, enabling enterprise partnerships with Unilever and a showcase at CES Las Vegas.

Anand Creations - Forward Deployed Engineering Practice

<https://anand-creations.com>

06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: I embed with a customer's team, run technical discovery, and ship production agentic AI inside their environment, from a one-week AI Opportunity Assessment through evals, tracing, and rollout. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a temporal knowledge graph (Graphiti on Neo4j) unifying 5+ silos (Salesforce, HubSpot, Pendo, conversations, product usage) into one time-aware memory every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.

SwissNRI - AI Cross-border Fintech

<https://www.swissnri.com>

01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families, replacing spreadsheets and expensive advisors. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file, with regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

PulseView - AI Market Intelligence

<https://pulse-view.anand-creations.com>

05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. AI agents generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship. Now serving live users on real-time feeds.
