Companies Founded

Hands-on technical leader who still ships code: as Tech Lead at Beekeeper I owned architecture end-to-end, acted as hiring manager for AI roles, and translated business problems (a \$337K vendor cost, a stalled onboarding funnel) into working systems within weeks. I operate across the full spread of a CTO's job: architecture, delivery, infrastructure, and the operational work, without treating any of it as beneath me. Currently embedded at LumApps, I own AI transformation end-to-end and report outcomes directly to C-level, the same cross-functional trust this role needs. 13+ years of production engineering in Java, Python, and TypeScript, plus an MBA, so I move naturally between technical decisions and business ones.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python · TypeScript · Java · LangChain · LangGraph · Google ADK · GCP · Vertex AI · MCP · AG-UI · Multi-Agent Systems · RAG · Evaluation Pipelines · Observability · FastAPI · Neo4j · Graphiti · On-Call · Salesforce

- Led technical discovery through production: agent architecture, eval pipelines, agent tracing, tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems. Reports directly to C-level on outcomes, not progress.
- Built and deployed production multi-agent workflows for outbound sales on Python, LangGraph and Google ADK over GCP Vertex AI, using ReAct, self-reflection and hierarchical delegation, with tools exposed over MCP servers and agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast: \$4M in approved opportunities per quarter; at 25% conversion, \$1M in quarterly revenue.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes. Event-driven ingest over Pub/Sub, a query and write-back contract per agent, and a freshness layer that flags stale facts, grounding RAG retrieval to cut hallucinations.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Java · Python · TypeScript · Vue · Kubernetes · AWS · Technical Hiring · OpenAI · LangChain · Kafka · PostgreSQL · Elastic Search · Jenkins · GitHub Actions · ClickHouse · Observability · Grafana · Datadog · Logz.io · On-Call

- Architected Employee Referral System end-to-end as Tech Lead reporting to CIO. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA because customer trust is measured in uptime.
- Built and mentored the AI engineering cohort as acting hiring manager for AI roles: defined the bar, ran the process, closed candidates, and grew engineers who now lead features independently.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks, turning a business cost problem into a working technical system. 12K+ assets translated, product team now iterates without external gatekeepers.
- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io): logs, metrics, dashboards, and alerting. Infrastructure work, treated as core, not an afterthought.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Technical Architecture · Technical Hiring · AI Strategy · Startup Evaluation · Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Advised multiple portfolio companies on technical hiring, AI strategy, and building engineering cultures that actually ship.

Dronistics · Founding Engineer

08/2018 - 03/2020

Java · Vue · PostgreSQL · AWS · Docker · Terraform · Infrastructure as Code · CI/CD

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live UX test for autonomous systems in the real world.
- Built cloud infrastructure and DevOps pipeline from scratch. Enterprise-grade reliability that enabled partnerships with Unilever and a CES showcase.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: I embed with a customer's team, run technical discovery, and ship production agentic AI inside their environment, from a one-week AI Opportunity Assessment through evals, tracing, and rollout. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a temporal knowledge graph (Graphiti on Neo4j) unifying 5+ silos (Salesforce, HubSpot, Pendo, conversations, product usage) into one time-aware memory every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families, replacing spreadsheets and expensive advisors. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file, with regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. AI agents generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship. Now serving live users on real-time feeds.
