

# Anand Bhaskaran

Lead AI Native Engineer / Agentic Coding & Software Factories / Client-Facing Technical Lead / MBA

📍 Zurich, Switzerland · ✉ anandbaskaran3193@gmail.com · 📞 +41763043193 · [in anandb3](#) · [anandbhaskaran](#) · [anand-creations](#)

\$1.5M+

Revenue Shipped

\$337K

Costs Eliminated

10M+

Users Served

3

Companies Founded

Engineer, product owner, and tech lead in one. 10+ years shipping AI-native systems to production and handing the keys back: AI agents that 2x outbound conversions at LumApps, LLM pipelines that eliminated \$337K in vendor cost at Beekeeper in 6 weeks, autonomous drone deliveries at Dronistics. Daily driver of agentic coding workflows (Claude Code, MCP, spec-driven, multi-agent orchestration). Founded three AI-native companies on the side to stay at the frontier. I set the engineering bar (tests, CI/CD, observability, eval harnesses) because AI amplifies the system it lands in.

## WORK EXPERIENCE

### LumApps · Senior AI Engineer

03/2026 - Present

- Python LangChain FastAPI GCP AI Agents MCP OpenAI RAG Neo4j Graphiti AI Governance Change Management
- Owned an AI outbound sales agent from fuzzy business problem to production: wrote the backlog, built the system with agentic workflows (LangChain, FastAPI, GCP), rolled it out to SDR and AE teams. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast \$4M approved opportunities per quarter.
  - Expanded scope to lead company-wide AI transformation strategy and governance. Teaching engineers, product, and sales how to work AI-native and making the new way of working stick.
  - Built AI Brain, an intelligent context layer over conversations, usage, and notes. Chose what to ship and what to cut based on business signal, not demo appeal.

### Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

- Java Python Vue Kubernetes AWS OpenAI Claude LangChain CrewAI Strands Agents Langfuse GitHub Actions Kafka PostgreSQL Elastic Search
- Replaced \$337K in annual vendor translation cost with an in-house LLM pipeline shipped in 6 weeks (GitHub Actions plus OpenAI, with an eval harness gating quality). 12K+ assets translated, product team iterates without external gatekeepers. Handed the keys back to product.
  - Architected the Employee Referral System end-to-end as Tech Lead reporting to the CIO. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Owned scope, backlog, GTM, and 99.99% SLA.
  - Built the AI engineering cohort at Beekeeper. Hired for craft, mentored engineers to lead features independently, and set the bar for tests, CI/CD, observability, and LLM eval harnesses (Langfuse, CrewAI, Strands Agents).
  - Co-owned GTM launches with Product and Sales (Seasonal Templates, Re-ignite Revenue, Sentiment Analysis). Each shipped with instrumentation so we knew within a week if it moved the metric. Killed the ones that did not.

### Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

- AI Strategy Client-Facing Advisory Technical Mentoring Startup Evaluation Scalability
- Evaluated 20+ startups on technical architecture, scalability, and AI readiness. Pushed back on hype in front of investors and founders; recommended what would survive production and what would not.
  - Mentored portfolio companies on technical hiring, AI strategy, agentic tooling adoption, and building engineering cultures that ship.

### Dronistics · Founding Engineer

08/2018 - 03/2020

- Vue Java PostgreSQL AWS Docker CI/CD Real-time Systems Flight Control APIs
- Shipped the end-to-end delivery platform (Vue, Java, PostgreSQL, AWS). 500+ real-world deliveries, 99.5% safety record, zero incidents. Built CI/CD and cloud infra from scratch so the bar held even as we scaled partnerships with Unilever and a CES showcase.
  - Engineered real-time flight control APIs and logistics optimization. 40% faster deliveries, enterprise-grade reliability that customers could trust their brand to.

C++PythonAWSGenetic AlgorithmsNeural NetworksEvolutionary AIRoboticsWebots

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and brains via genetic algorithms. Migrated the simulation pipeline to AWS for large-scale parallel runs; work featured on the AWS Public Sector Blog.
- Teaching Assistant for Evolutionary Robotics at EPFL. Supervised 20+ master's students hands-on: change management practice for engineers picking up unfamiliar tooling.
- Foundational AI experience (optimization, search, fitness landscapes, learning from environment) that shapes how I approach LLM and agentic systems today.

ENTREPRENEURIAL PROJECTS

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market analysis platform where AI agents both generate and justify trading signals. Built for my own portfolio first; opened to retail traders after self-validation. Core principle: if the model cannot explain the signal, it does not ship.

- Multi-agent workflow that fuses technical and news-based inputs, produces a signal, and generates the rationale. Explainability gates every ship. Live product with real users.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

AI-native MVP for small real estate teams. Vision models turn inspection photos into structured records; LLM agents turn those records into multilingual, marketing-ready listings end-to-end.

- Single agent workflow from photo capture to published listing, zero copy-paste. Built spec-driven with an eval harness so a bad extraction never becomes a bad listing.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native platform for Swiss-Indian families navigating FEMA, DTAA, and Swiss tax regulations. Zero-to-MVP in 3 months with a compliance-first agentic design.

- RAG-grounded tax assistant that answers cross-border compliance questions in plain language with citations back to the regulation. Regulatory guardrails built before features; 40% uplift in user satisfaction from feedback-driven iteration.
