Companies Founded

Engineer at the intersection of AI applications, product thinking, and production-grade systems. The rare combination behind AI products that actually ship and move metrics. I run Anand Creations, a forward deployed engineering practice, and I am currently deployed at LumApps building production multi-agent systems on GCP that 2x outbound conversions and forecast \$1M in quarterly revenue. 13+ years building software for millions: LLM pipelines that eliminated \$337K in vendor cost at Beekeeper, autonomous drone deliveries at Dronistics, co-evolution of robot brains and bodies via genetic algorithms at EPFL. Founded three companies on the side. I optimize for outcomes, not artefacts. Every system I build has a metric attached and a customer on the other side.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python TypeScript GCP Vertex AI LangChain LangGraph Google ADK MCP AG-UI FastAPI Multi-Agent Systems
ReAct RAG Vector Databases Evaluation Pipelines LangSmith Observability On-Call Neo4j Graphiti Salesforce

- Built and deployed production multi-agent workflows for outbound sales on Python, LangGraph and Google ADK over GCP Vertex AI, using ReAct, self-reflection and hierarchical delegation, with tools exposed over MCP servers and agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast: \$4M in approved opportunities per quarter; at 25% conversion, \$1M in quarterly revenue.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes. Event-driven ingest over Pub/Sub, a query and write-back contract per agent, and a freshness layer that flags stale facts, grounding RAG retrieval to cut hallucinations.
- Led technical discovery through production: agent architecture, eval pipelines, agent tracing (LangSmith), tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems. Reports directly to C-level on outcomes, not progress.
- LumApps is a client engagement of my own practice, Anand Creations: I embed with the team and own the program from discovery to production.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Java Python TypeScript Vue Kubernetes AWS OpenAI LangChain Kafka PostgreSQL Elastic Search Jenkins
GitHub Actions ClickHouse Claude Langfuse CrewAI Strands Agents Observability Grafana Datadog Logz.io On-Call

- Architected Employee Referral System end-to-end. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA because customer trust is measured in uptime.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks. 12K+ assets translated, product team now iterates without external gatekeepers.
- Built AI Onboarding Specialist giving every new signup personalized, high-touch guidance at scale. 100% of customers guided through setup, time-to-first-value reduced without adding headcount.
- Designed distributed templating engine that cut customer setup time 90%. Powers 15% of all platform assets for 10M+ users. Customers go from zero to live in minutes, not days.
- Built GenAI demo system for sales. Auto-generates personalized content from Salesforce data so every pitch feels custom-built for that customer. Improved demo speed and close rates.
- Led Search Platform revamp across 3 teams. Redesigned indexing and ranking to surface what users mean to find, not just what they typed. Measurable lift in user engagement.
- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io): logs, metrics, dashboards, and alerting.
- Built and mentored the AI engineering cohort. Hired for craft and curiosity, grew engineers who now lead features independently.
- Co-owned GTM launches with Product and Sales (Seasonal Templates, Re-ignite Revenue, Sentiment Analysis). Each shipped with instrumentation so we knew within a week if it moved the needle.

AI Strategy Startup Evaluation Technical Mentoring Algorithmic Trading Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.
- Advised multiple portfolio companies on technical hiring, AI strategy, and building engineering cultures that actually ship.

Vue Java PostgreSQL AWS Docker Terraform Infrastructure as Code CI/CD Real-time Systems Flight Control APIs
Logistics Optimization

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live UX test for autonomous systems in the real world.
- Built cloud infrastructure and DevOps pipeline from scratch. Enterprise-grade reliability that enabled partnerships with Unilever and a CES showcase.
- Engineered real-time flight control APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents.

C++ Python AWS Genetic Algorithms Neural Networks Evolutionary AI Robotics Webots

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and brains via genetic algorithms. Rare research direction where morphology and neural control evolve together through artificial selection.
- Migrated the simulation pipeline to AWS for large-scale parallel evolution runs impractical on local hardware. Secured AWS Cloud Credits for Research, work featured on the AWS Public Sector Blog.
- Teaching Assistant for Evolutionary Robotics at EPFL. Supervised 20+ master's students through hands-on projects in genetic algorithms, neural controllers, and embodied AI.
- Foundational AI experience (optimization, search, fitness landscapes, learning from environment) that informs how I approach modern LLM and agentic systems today.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: I embed with a customer's team, run technical discovery, and ship production agentic AI inside their environment, from a one-week AI Opportunity Assessment through evals, tracing, and rollout. Also the home for the AI products I build and run.

- Flagship engagement, the GTM AI Brain: a temporal knowledge graph (Graphiti on Neo4j) unifying 5+ silos (Salesforce, HubSpot, Pendo, conversations, product usage) into one time-aware memory every agent reads and writes, with event-driven ingest over Pub/Sub and a per-agent query and write-back contract.
- Take prototypes to production for clients end to end: multi-agent systems, MCP tool servers, RAG grounding, eval pipelines, and observability, plus reusable modules distilled from repeatable field patterns.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. AI agents generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship. Now serving live users on real-time feeds.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Property inspections run on paper, clipboards, and WhatsApp photos. Built an AI-native MVP: vision models turn inspection photos into structured records; LLM agents turn those records into marketing-ready listings.

- Vision pipeline that extracts structured signals (room type, condition, defects) from inspection photos. Replaces paper-based reports with queryable, AI-readable data.
- LLM listing generator turns inspection records into multilingual, marketing-ready property listings end-to-end. One agent workflow, zero copy-paste from photo to published listing.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families, replacing spreadsheets and expensive advisors. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file, with regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.
