10M+

Users Served

3

Products Founded

Full-stack engineer who ships AI-native product features end to end: frontend, backend, agent workflows, and the reliability layer that keeps them working under real usage. Lead AI Engineer at LumApps building production multi-agent workflows on Python and Google ADK, streamed live to the UI, with evals, tracing, and cost-per-request instrumentation on top; 2x outbound conversions, \$1M forecast in quarterly revenue. Run Anand Creations on the side and have founded three AI products (PulseView, Proplab, SwissNRI), each taken from idea to real users solo. 13+ years across full-stack systems for 10M+ users, cross-team ownership, and the pragmatic trade-offs that make agents work in production.

WORK EXPERIENCE

LumApps · Lead Full-Stack AI Engineer [▶ Watch demo](#) 03/2026 - Present

Python TypeScript Next.js React Node.js GCP Vertex AI LangGraph Google ADK MCP AG-UI FastAPI
Multi-Agent Systems RAG Vector Databases Evaluation Pipelines LangSmith Observability On-Call Neo4j Graphiti
Streaming Kubernetes Docker

- Built production multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI. ReAct with self-reflection for planning and recovery, tools exposed over MCP, agent state streamed live to the UI over AG-UI with partial results and tight latency. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day. Forecast: \$1M in quarterly revenue.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, product usage) into one time-aware memory every agent reads and writes. Grounds RAG so agents stop hallucinating and long-running workflows keep persistent context.
- Owned the reliability layer: eval pipelines, LangSmith tracing, tool-selection tuning, cost-per-request instrumentation, and on-call for global production. Fallback and retry paths for LLM and tool failures. Reports directly to C-level on outcomes.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

TypeScript Vue Node.js Java Python Microfrontends Module Federation Kubernetes Docker AWS OpenAI Claude
LangChain CrewAI PostgreSQL Elastic Search Kafka GitHub Actions Grafana Datadog

- Replaced \$337K in annual vendor translation costs with an in-house LLM pipeline shipped in 6 weeks (GitHub Actions + OpenAI). 12K+ assets translated; product team ships in new languages without a gatekeeper.
- Built AI Onboarding Specialist and a GenAI demo generator that auto-compose personalized streams from Salesforce data. LLM-powered product features shipped end to end (backend, prompts, UI); improved demo speed, close rates, time-to-first-value.
- Designed a distributed templating engine that cut customer setup time 90% and now powers 15% of all assets on the platform (10M+ users). Full-stack, Product Owner of the feature.
- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io). Hired and mentored the AI engineering cohort; engineers now lead features independently.

Dronistics (EPFL spin-off) · Founding Engineer 08/2018 - 03/2020

Vue Node.js Java PostgreSQL AWS Docker Terraform CI/CD Real-time Systems Flight Control APIs

- Shipped end-to-end delivery platform (Vue, Java, PostgreSQL) with operator UI and real-time flight-control APIs. 500+ autonomous last-mile deliveries in the real world.
- Built CI/CD and AWS infrastructure from scratch (Docker, Terraform). Enterprise reliability that enabled Unilever partnership and a CES showcase.

EPFL, Laboratory of Intelligent Systems (Robogen) · AI Research Engineer 08/2016 - 03/2020

C++ Python AWS Genetic Algorithms Neural Networks Robotics Open Source Webots

- Built Robogen, an open-source platform for co-evolution of robot bodies and brains via genetic algorithms. Migrated the simulation pipeline to AWS; secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.
- Teaching Assistant for Evolutionary Robotics. Supervised 20+ master's students on optimization, neural controllers, and embodied learning. Foundational AI craft that underpins my agentic work today.

PulseView - Explainable AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence for retail traders. AI agents generate AND justify trading signals from technical and news data; if the model cannot explain the signal it does not ship. Built solo end to end (product, agent stack, UI, streaming) and shipped to live users on real-time feeds.

Proplab - AI-Native Property Workflows · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Vision pipeline extracts structured signals (room type, condition, defects) from inspection photos, replacing paper reports with queryable data. LLM agents then compose multilingual, marketing-ready listings end to end. One flow from photo to published listing, zero copy-paste. Idea to production, solo.

Anand Creations - AI Products & Forward Deployed Engineering · <https://anand-creations.com>06/2024 - Present

Founder & Principal Builder

Independent studio and home for the AI-native products I design, build, and ship on my own (PulseView, Proplab, SwissNRI). Full-stack, AI at the core, concept to real customers.
