Companies Founded

Applied AI engineer who turns model capability into products that hold up in real use. Currently Lead AI Engineer at LumApps, shipping production multi-agent systems on GCP that 2x outbound conversions and forecast \$1M in quarterly revenue. I own AI features end to end: prompts, tools, memory, evals, tracing, cost and latency tuning. 13+ years shipping software to 10M+ users, including an LLM pipeline that eliminated \$337K in vendor cost at Beekeeper and foundational neural network and evolutionary AI research at EPFL. Zurich-based, product-minded, ship-test-refine by default.

WORK EXPERIENCE

LumApps · Lead Applied AI Engineer [▶ Watch demo](#) 03/2026 - Present

Python LLMs GCP Vertex AI LangGraph Google ADK MCP AG-UI Multi-Agent Systems ReAct Prompt Engineering RAG Vector Databases Evaluation Pipelines LangSmith Tracing & Observability Cost & Latency Tuning Neo4j Graphiti FastAPI

- Shipped production multi-agent workflows for outbound sales on Python, LangGraph and Google ADK over GCP Vertex AI. ReAct, self-reflection and hierarchical delegation; tools exposed over MCP; agent state streamed to the UI over AG-UI. Raw model output shaped into structured, dependable actions with verification loops and human-in-the-loop draft-before-send. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day, forecast \$1M in quarterly revenue.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, transcripts, product usage) into one time-aware memory every agent reads and writes. Event-driven ingest over Pub/Sub, per-agent query and write-back contracts, and a freshness layer that flags stale facts to ground RAG and cut hallucinations.
- Owned end-to-end: agent architecture, eval pipelines that reflect real usage, LangSmith tracing across model, orchestration, and infra layers, tool-selection tuning, and cost-per-request instrumentation. Tuned live systems for speed, cost, and reliability; on-call for global production.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

Python Java TypeScript Kubernetes AWS OpenAI Claude LangChain CrewAI Strands Agents Langfuse Kafka PostgreSQL Elastic Search ClickHouse Grafana Datadog Logz.io On-Call

- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks. 12K+ assets translated, product team iterates without external gatekeepers. Evals and prompt tuning to keep quality on par with human vendors.
- Built AI Onboarding Specialist giving every new signup personalized, high-touch guidance at scale. 100% of customers guided through setup, time-to-first-value reduced without adding headcount.
- Built GenAI demo system for sales. Auto-generates personalized content from Salesforce data so every pitch feels custom-built. Improved demo speed and close rates.
- Ran observability and global on-call (Grafana, Datadog, Logz.io) with logs, metrics, dashboards, and alerting; diagnosed and fixed production issues at the source across model, service, and infra layers.

Dronistics · Founding Engineer 08/2018 - 03/2020

Vue Java PostgreSQL AWS Docker Real-time Systems Flight Control APIs Logistics Optimization

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live UX test for autonomous systems in the real world.
- Engineered real-time flight control APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents.

EPFL, Laboratory of Intelligent Systems (Robogen) · AI Research Engineer 08/2016 - 03/2020

C++ Python AWS Genetic Algorithms Neural Networks Evolutionary AI Robotics Webots

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and neural controllers via genetic algorithms. Rare research direction where morphology and neural control evolve together through artificial selection.
- Migrated the simulation and training pipeline to AWS for large-scale parallel evolution runs impractical on local hardware. Secured AWS Cloud Credits for Research, work featured on the AWS Public Sector Blog.
- Foundational ML experience (optimization, search, fitness landscapes, neural controller training) that informs how I approach modern LLM and agentic systems today.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent practice, home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView). Same playbook I bring to client engagements: multi-agent systems, RAG grounding, eval pipelines, tracing, and cost-per-request telemetry, taken from zero to production end to end.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. AI agents generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship. Now serving live users on real-time feeds.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file. Zero-to-MVP in 3 months, 40% uplift in satisfaction.
