Costs Eliminated

10M+

Users Served

3

Companies Founded

Engineering leader who takes production AI systems from prototype to scale for 10M+ users. I invest directly in AI too: secondary positions in OpenAI and Anthropic, and a personal Python system that tracks \$1.5M across equities and options by integrating multiple market data APIs, so NAV, IRR, and fund structures are lived experience, not theory. At Beekeeper I owned architecture across five concurrent production systems and built the pipelines that tame messy real-world input: a 6-week LLM translation pipeline, a vision pipeline that turns inspection photos into structured data. 13+ years shipping production software for millions of users, with the same rigor applied to how I evaluate AI companies as an investor.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python Evaluation Pipelines Multi-Agent Systems LangGraph Google ADK Vertex AI GCP RAG Neo4j Graphiti
Observability On-Call LangSmith Salesforce TypeScript MCP AG-UI FastAPI ReAct

- Led technical discovery through production: agent architecture, eval pipelines, agent tracing (LangSmith), tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes, taming messy, inconsistent data into a single queryable layer.
- Built and deployed production multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI, using ReAct, self-reflection and hierarchical delegation. 2x open rates, 2x approved opportunities, \$1M forecast in quarterly revenue.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Python Java TypeScript Vue Kubernetes AWS Kafka PostgreSQL ClickHouse Elastic Search OpenAI LangChain
CrewAI Strands Agents Langfuse Claude Observability Grafana Datadog Logz.io On-Call Jenkins GitHub Actions

- Owned architectural design across five concurrent production systems (Artifacts, Forms, Employee Referral, Templater, Manager Hub), robust and modular by design, not by accident.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks (prototype to production). 12K+ assets translated, product team now iterates without external gatekeepers.
- Architected Employee Referral System end-to-end. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA because customer trust is measured in uptime.
- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io): the discipline that separates a demo from something that survives contact with real traffic.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Algorithmic Trading AI Strategy Startup Evaluation Technical Mentoring Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.

Dronistics · Founding Engineer

08/2018 - 03/2020

Logistics Optimization Real-time Systems Flight Control APIs Vue Java PostgreSQL AWS Docker Terraform
Infrastructure as Code CI/CD

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live production test for autonomous systems.
- Engineered real-time flight control APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed engineering practice, currently the home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView). Open to forward-deployed client engagements: embedding with a team, running technical discovery, and shipping production agentic AI end to end.

- Take my own products from zero to production end to end: multi-agent systems, RAG grounding, eval pipelines, and observability, the same playbook I bring to any engagement.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. Tracks \$1.5M across equities and options, built in Python and integrated with multiple market data and brokerage APIs. AI agents generate AND justify trading signals from technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Property inspections run on paper, clipboards, and WhatsApp photos. Built an AI-native MVP: vision models turn inspection photos into structured records; LLM agents turn those records into marketing-ready listings.

- Vision pipeline extracts structured signals (room type, condition, defects) from messy, inconsistent inspection photos, replacing paper-based reports with queryable, AI-readable data.
