Companies Founded

Forward deployed engineer with 13+ years shipping software the customer actually uses. At LumApps I lead technical discovery through production for a global SaaS, owning agent architecture, integrations, and the escalation path when it breaks. Anand Creations is my independent FDE practice: embed, run discovery, build the integrations, ship. Deep across Python, JavaScript, SQL and the messy real-world debugging that comes with client-specific constraints. MBA-trained, spoken at Dev Innovation Summit and Front Conference, and a mentor to engineers who now lead features on their own.

WORK EXPERIENCE

LumApps · Lead AI Engineer [▶ Watch demo](#) 03/2026 - Present

Forward Deployed AI-Native Platform Technical Discovery Client Integrations Python JavaScript SQL REST APIs Webhooks OAuth GCP Vertex AI LangChain LangGraph MCP PostgreSQL Neo4j Salesforce On-Call

- Lead technical discovery through production for a global AI-native SaaS: agent architecture, POCs, integrations with Salesforce, HubSpot, Pendo via REST + webhooks + OAuth, and MCP tool servers exposed to end users. 2x open rates, 2x approved opportunities, \$1M/quarter forecast revenue.
- Serve as the technical escalation point when integrations break: reproduce, root-cause, fix, and write the postmortem. Own eval pipelines (LangSmith), cost telemetry, and on-call for global production.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j unifying 5+ enterprise silos into one time-aware source. Architectural decision shaped by real deployment learnings, not theory.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

Complex Delivery Client Implementations Mentorship Playbooks Python Java TypeScript JavaScript SQL PostgreSQL ClickHouse Elastic Search REST APIs AWS Kubernetes OpenAI Grafana Datadog

- Architected Employee Referral System end-to-end as Tech Lead of Incubation, reporting to CIO. Ran planning, scoping, and delivery of a complex multi-quarter implementation. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR).
- Replaced \$337K in annual vendor translation costs with an in-house Python + OpenAI pipeline shipped in 6 weeks. Full scope: diagnose the recurring spend, build the integration, ship with instrumentation, kill the contract.
- Ran observability and on-call for global production (Grafana, Datadog, Logz.io) across Python, Java, TypeScript, Vue services on Kubernetes. Reproduced and diagnosed customer-facing issues, built the fix, documented the playbook.
- Hired and mentored the AI engineering cohort. Grew engineers who now lead features independently. Co-owned GTM launches with Sales, PM, and Customer Success with instrumentation to know within a week if they moved the needle.

Tenity · Startup Mentor & Technology Evaluation Panelist 06/2024 - Present

Technical Discovery Cross-functional Leadership AI Strategy Startup Evaluation Stakeholder Communication

- Evaluated 20+ startups on architecture, scalability, and AI readiness for seed-to-VC investment decisions. Structured, data-driven feedback to investment committees.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading; advised founders on integrations, delivery playbooks, and building engineering teams that ship.

Dronistics · Founding Engineer 08/2018 - 03/2020

Founding Engineer Enterprise Integrations Client-Facing Delivery Vue Java PostgreSQL AWS Docker REST APIs

- Founding engineer for EPFL spin-off drone delivery. Shipped end-to-end platform (Vue, Java, PostgreSQL, AWS) powering 500+ real-world deliveries. Enterprise-grade integrations enabled Unilever partnership and CES Las Vegas showcase.
- Owned the full client-facing implementation as single accountable owner: architecture, integrations, on-call, and the customer conversations behind them.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed engineering practice: embed with a team, run technical discovery, build the integrations and custom implementations that get the product to work under real client constraints. Home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView).

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax platform for Swiss-Indian families in a heavily regulated domain (DTAA, FEMA, Swiss tax). Ran discovery with real users, built RAG-grounded assistant with citations back to source regulation. Compliance-first design in a regulated industry, same discipline required to ship in insurance. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence platform for retail traders. AI agents generate AND justify trading signals with explainability built in: if the model can't explain the signal, it doesn't ship. Auditability is the whole product.
