Companies Founded

Software engineer who builds the production infrastructure that trading and forecasting systems run on. At Beekeeper I owned architecture across five concurrent production systems (Kafka, Kubernetes, PostgreSQL) and ran observability (Grafana) and on-call for a platform used by 10M+ users, the discipline real-time execution and monitoring demands. I've mentored a team scaling high-frequency algorithmic trading systems in production, and I invest in the space myself: I hold a stake in Polymarket and think applying AI to prediction markets is worth building for. 13+ years shipping production software and the data pipelines that tame messy, heterogeneous real-world input, from LLM systems at scale to a vision pipeline that turns unstructured photos into structured data.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python Evaluation Pipelines Observability On-Call Multi-Agent Systems RAG Neo4j Graphiti LangGraph Google ADK Vertex AI GCP LangSmith Salesforce TypeScript MCP AG-UI FastAPI ReAct

- Led technical discovery through production: agent architecture, eval pipelines, agent tracing (LangSmith), tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes, combining heterogeneous signals into a single queryable layer.
- Built and deployed production multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI. 2x open rates, 2x approved opportunities, \$1M forecast in quarterly revenue.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Python Kafka Kubernetes PostgreSQL AWS ClickHouse Elastic Search Observability Grafana Datadog Logz.io On-Call GitHub Actions Jenkins Java TypeScript Vue OpenAI LangChain CrewAI Strands Agents Langfuse Claude

- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io): logs, metrics, dashboards, and alerting for performance, exposure, and operational integrity.
- Owned architectural design across five concurrent production systems (Artifacts, Forms, Employee Referral, Templater, Manager Hub), robust and modular by design, not by accident.
- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks (prototype to production). 12K+ assets translated, product team now iterates without external gatekeepers.
- Architected Employee Referral System end-to-end. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA because customer trust is measured in uptime.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Algorithmic Trading Startup Evaluation AI Strategy Technical Mentoring Scalability

- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.
- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.

Dronistics · Founding Engineer

08/2018 - 03/2020

Real-time Systems Flight Control APIs Logistics Optimization PostgreSQL Vue Java AWS Docker Terraform Infrastructure as Code CI/CD

- Engineered real-time flight control APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents: automated safeguards that held up under real operating conditions.
- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live production test for autonomous systems.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed engineering practice, currently the home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView). Open to forward-deployed client engagements: embedding with a team, running technical discovery, and shipping production agentic AI end to end.

- Take my own products from zero to production end to end: multi-agent systems, RAG grounding, eval pipelines, and observability, the same playbook I bring to any engagement.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence built for my own trading portfolio first, then opened to retail traders. Tracks \$1.5M across equities and options, integrating multiple market data and brokerage APIs in Python. AI agents generate AND justify trading signals by fusing heterogeneous technical and news data, with explainability and evaluation built in: if the model can't explain the signal, it doesn't ship.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Property inspections run on paper, clipboards, and WhatsApp photos. Built an AI-native MVP: vision models turn inspection photos into structured records; LLM agents turn those records into marketing-ready listings.

- Vision pipeline extracts structured signals (room type, condition, defects) from messy, inconsistent inspection photos, replacing paper-based reports with queryable, AI-readable data.
