Dear GitLab team,

I run Anand Creations as an independent Forward Deployed Engineering practice. Embed with a team, diagnose adoption blockers, contribute production code, and transition ownership out once the customer is stable. Your job description reads like a page from my own site.

The agentic-SDLC half of the role is where I spend most of my week. At LumApps I drive governed, measurable adoption of a production multi-agent system on LangGraph, Google ADK, MCP and AG-UI: eval pipelines, LangSmith tracing, context management through a temporal knowledge graph I designed (Graphiti and Neo4j), human-in-the-loop guardrails, and cost-per-request instrumentation. Real outcomes: 2x open rates, 2x approved opportunities, \$1M forecast quarterly. The same shape of work I would do inside strategic accounts with GitLab Duo Agent Platform.

The field-and-cross-functional half is not new either. At Beekeeper I owned the Employee Referral System end to end for enterprise customers, ran the GTM with Sales and PM, and turned it into the platform's top revenue channel (\$1.5M+, \$500K ARR). I coordinate across Product, Engineering, and customer teams without formal authority daily. I have taken production ownership calls at 3am and shipped bug fixes into third-party codebases when a customer was blocked. I also write and speak: four international conference talks, published pieces on TowardsAI and my own blog laying out production-agent patterns, memory design, and verification loops. Same artefacts your success measures list.

Honest note: I write Python, TypeScript, Java and Vue in production, not Ruby on Rails or Go. I read Ruby fine and pick up mature codebases fast (Beekeeper's platform, LumApps' agent stack, Robogen at EPFL) so I would ramp on Rails or Go inside the first month. If you weigh agentic-AI-in-enterprise heavier than any specific language, and the JD suggests you do, I am the profile you are looking for.

Zurich-based, EMEA-native, ready to be on the ground with your customers.

Thanks for reading,
Anand Bhaskaran
