Companies Founded

AI engineer who takes a vague business problem to a working demo and then to production, with a success metric attached. As Founding AI Engineer (GTM) at LumApps I design human-in-the-loop agentic workflows on GCP Vertex AI (LangGraph, Google ADK, MCP) over a Pub/Sub-fed knowledge graph that integrates 5+ data sources: 2x outbound conversions and a \$1M quarterly revenue forecast. 13+ years in Python, Java and TypeScript on systems for 10M+ users: an LLM pipeline that replaced \$337K in vendor cost, a \$1.5M revenue product owned from discovery to 99.99% SLA, CI/CD and Terraform built from scratch at a drone startup. MBA and co-founder of a RAG-grounded fintech compliance platform with explainability and regulatory guardrails built in.

WORK EXPERIENCE

LumApps · Founding AI Engineer, GTM [▶ Watch demo](#) 03/2026 - Present

Python GCP Vertex AI Pub/Sub LangGraph Google ADK LangChain MCP Multi-Agent Systems Human-in-the-Loop
RAG Vector Databases Neo4j Graphiti Evaluation Pipelines LangSmith Model Monitoring FastAPI TypeScript AG-UI
Salesforce On-Call

- Designed and shipped human-in-the-loop agentic workflows for outbound sales on GCP Vertex AI: Python, LangGraph and Google ADK (ReAct, self-reflection, hierarchical delegation), tools over MCP servers, draft-before-send checkpoints for reps, agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day; forecast \$1M in quarterly revenue.
- Built AI Brain, a temporal knowledge graph on Graphiti and Neo4j that integrates 5+ data sources (Salesforce, HubSpot, Pendo, transcripts, product usage) through real-time event-driven ingest over Pub/Sub. Per-agent query and write-back contract, freshness layer that flags stale facts, grounds RAG retrieval to cut hallucinations.
- Drove discovery with Sales and C-level from open problem to defined user journeys, success metrics and a working demo, then to production: eval pipelines, model monitoring and tracing (LangSmith), cost-per-request instrumentation, on-call. Report to C-level on outcomes, not progress.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

Java Python TypeScript OpenAI Claude LangChain CrewAI Strands Agents Langfuse Kafka PostgreSQL
Elastic Search ClickHouse Kubernetes AWS GitHub Actions Jenkins Grafana Datadog On-Call Vue

- Replaced \$337K in annual vendor translation costs with an in-house LLM pipeline (GitHub Actions, OpenAI APIs) shipped in 6 weeks. 12K+ assets translated; product team iterates without external gatekeepers.
- Owned Employee Referral System from discovery to production as Tech Lead reporting to CIO. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed and run at 99.99% SLA.
- Product Owner of the distributed templating engine (Java, Kafka): ran discovery on highest-value use cases, defined vision and epics, shipped. Cut customer setup time 90%; powers 15% of all assets for 10M+ users.
- Ran observability and on-call for global production systems (Grafana, Datadog, Logz.io). Co-owned GTM launches with Product and Sales, each instrumented with success metrics so we knew within a week if it moved the needle.

Tenity · Startup Mentor & Technology Evaluation Panelist 06/2024 - Present

Technical Discovery AI Strategy Fintech Startup Evaluation Algorithmic Trading Scalability

- Led technical discovery with founders across 20+ fintech and deep-tech startups on architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production; advised portfolio companies on AI strategy and technical hiring.

Dronistics · Founding Engineer 08/2018 - 03/2020

AWS Terraform Infrastructure as Code CI/CD Docker Java Vue PostgreSQL Real-time Systems Logistics Optimization

- Built AWS infrastructure, Terraform and CI/CD pipeline from scratch for an autonomous drone delivery platform (Vue, Java, PostgreSQL). Reproducible, enterprise-grade environments enabled a Unilever partnership and a CES showcase.
- Engineered real-time flight control APIs and logistics optimization algorithms. 500+ real-world deliveries, 40% faster, 99.5% safety record, zero incidents.

Python

C++

Neural Networks

Genetic Algorithms

Evolutionary AI

AWS

Robotics

Webots

- Engineered Robogen, an open-source platform that co-evolves robot bodies and neural-network controllers via genetic algorithms. Hands-on ML methodology: optimization, search, fitness landscapes, learning from environment.
- Migrated the simulation pipeline to AWS for large-scale parallel evolution runs impractical on local hardware. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.

ENTREPRENEURIAL PROJECTS

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions with citations back to the source regulation (explainable by design); compliance-first agents flag risk before users file, with regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent practice and home for the AI products I build and run myself (SwissNRI, Proplab). Same playbook every time: discovery with the business owner, a working demo, then production with evals, tracing, CI/CD, and a hand-off the team can run without me.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Vision pipeline extracts structured signals (room type, condition, defects) from unstructured inspection photos into queryable, AI-readable data. LLM agents then turn those records into multilingual, marketing-ready listings: one workflow from photo to published listing.
