Dear Google Cloud Hiring Team,

I take a vague business problem to a PRD, a working demo, and then production, with a success metric attached. That is the loop this role runs, and I have run it at every company I have worked for.

At LumApps I am the Founding AI Engineer on the GTM team. Sales came to me with an open problem: reps spend hours a day on outbound research and still miss. I ran discovery with Sales and C-level, wrote the user journeys and success metrics, built a demo, and shipped it on GCP Vertex AI: human-in-the-loop agentic workflows on LangGraph and Google ADK with draft-before-send checkpoints, tools over MCP servers, agent state streamed to the UI over AG-UI. Open rates and approved opportunities doubled, reps save 2 to 3 hours a day, and the forecast is \$1M in quarterly revenue. Underneath sits an AI Brain I designed, a temporal knowledge graph on Graphiti and Neo4j with event-driven ingest over Pub/Sub from Salesforce, HubSpot, Pendo and product usage, so retrieval stays grounded. Every release ships with eval pipelines, model monitoring, tracing and cost-per-request telemetry.

I build prototypes production-first because I have carried them to production myself. At Beekeeper I replaced a \$337K annual vendor contract with an in-house LLM pipeline in 6 weeks and owned the Employee Referral System from discovery to a 99.99% SLA on a platform serving 10M+ users. At Dronistics I built the CI/CD pipeline and AWS infrastructure from scratch, and I maintain a published Terraform module. Written hand-off docs are how each of these moved to the teams that run them today.

On the financial side, I co-founded SwissNRI, a RAG-grounded cross-border tax and compliance platform where every answer cites the source regulation and guardrails came before features. As a Tenity panelist I ran technical discovery with 20+ fintech startups to judge AI readiness. I hold an MBA and a Master's in Innovation and Entrepreneurship.

I am based in Zurich and would like to bring this mix to Gemini, Vertex AI and Google Cloud's customers.

Thanks for your time. I would welcome the chance to talk.
