Conference Talks

Product-minded AI engineer who ships marketing-tech LLM systems that customers actually use. At LumApps I built the AI-powered outbound platform (multi-agent workflows on Python + LangGraph + GCP Vertex AI, MCP tool servers I authored) backed by AI Brain, a temporal knowledge graph unifying Salesforce, HubSpot, Pendo and product-usage signals into one customer data layer. 2x conversions, \$1M forecast quarterly. Prior LLM shipping at Beekeeper (\$337K vendor cost eliminated in 6 weeks, GenAI demo tooling for Sales). Founded 3 AI products solo through Anand Creations, taking each from POC to real users. MBA (93.2%). Remote-native since 2018.

On-Call

- Shipped a production marketing-and-outbound AI platform: multi-agent workflows on Python + LangGraph + Google ADK, tools over MCP servers I authored, agent state streamed live over AG-UI. From POC to full production; 2x open rates, 2x approved opportunities, \$1M forecast quarterly.
- Designed AI Brain, a temporal knowledge graph on Graphiti/Neo4j unifying Salesforce, HubSpot, Pendo and product-usage signals into one time-aware customer data layer every agent reads and writes. Data agents answer analytics questions in natural language without breaking data trust.
- Made the key architecture calls solo: framework choice (LangGraph over vanilla LangChain), memory pattern (temporal KG over vector-only RAG), evaluation gate (golden suites + LangSmith + safety cases). Own reliability and on-call for global production.

Backend Architecture

- Replaced \$337K/yr in vendor translation costs with an in-house LLM pipeline shipped in 6 weeks (GitHub Actions + OpenAI + LangChain). 12K+ marketing/content assets translated; marketers ship in new languages without a gatekeeper.
- Built AI Onboarding Specialist and a GenAI demo generator that auto-composed personalized, on-brand content per account from Salesforce data. Direct marketing-tech impact: improved demo speed and close rates.
- Designed a distributed templating engine that cut customer setup time 90% and powers 15% of all assets on the platform (10M+ users). Full-stack, Product Owner; backend architecture at scale.
- Ran observability and global on-call (K8s, AWS, Grafana, Datadog, Logz.io, Langfuse). Hired and mentored the AI engineering cohort.

POC to Production

- Founding engineer at a startup. Shipped full stack backend + operator UI (Vue, Java, PostgreSQL, real-time APIs, AWS/Docker/Terraform) from empty repo to 500+ deliveries. POC-to-production motion is the whole job here.
- Direct customer engagement (Unilever partnership, CES showcase). Turned prototypes into signed opportunities.

PulseView - Explainable AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time AI agents that generate AND justify trading signals from technical and news data. Solo end to end: product, agent stack, UI, live users on real-time feeds. Data agents that answer 'what is the signal and why' in one turn.

Anand Creations - AI Products & Studio · <https://anand-creations.com>06/2024 - Present

Founder & Principal Builder

Independent studio and home for 3 AI-native products I designed, built, marketed, and shipped solo (PulseView, Proplab, SwissNRI). Every product required end-to-end POC-to-production including branding, positioning, and user workflows.

Proplab - AI-Native Property Workflows · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Vision pipeline turns inspection photos into structured records; LLM agents compose multilingual, marketing-ready listings end to end. One flow from photo to published listing, zero copy-paste. AI-assisted UX designed around the marketer.
