Dear Hostaway team,

I am the person you are describing. At LumApps I own the AI-native GTM stack: multi-agent workflows over HubSpot, Salesforce and Pendo that turn a rep's brief into researched, personalized outbound. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day, \$1M/quarter forecast revenue. I decide build vs buy, wire the integrations, run the evals, and instrument cost per request. Nothing ships without a number attached.

Your campaign-builder example is a pattern I already run in production. On the side, Proplab (proplab.io) is my own real-estate campaign builder: property team drops in inspection photos, a vision pipeline extracts structured signals (room type, condition, defects), and LLM agents turn those into multilingual, marketing-ready listings end-to-end. One workflow from raw input to published assets, zero copy-paste. Same shape as briefing to Meta/LinkedIn/Google-executed ads.

The GTM fluency comes from the prior 6 years at Beekeeper: co-owned launches with Sales, PM and Marketing (Seasonal Templates, Re-ignite Revenue, Sentiment Analysis), built a GenAI demo system fed by Salesforce data so every pitch felt custom-built, and killed a \$337K/year vendor translation contract with a 6-week in-house LLM pipeline. Full build-vs-buy call, executed. Employee Referral System I architected became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). MBA-trained on top so the business impact conversation with marketing leaders is native.

I have been remote-first since 2018, based in Zurich (Europe). Comfortable with ambiguity, comfortable being the single accountable owner, comfortable moving from a marketer's brief to a shipped agent without a heavy process.

Would love to talk about the marketing workflows where you most need agents shipped this quarter.

Thanks for reading,
Anand Bhaskaran
