---

Dear Neho team,

Your JD describes the exact job I already do, applied to a domain I already build in on the side.

At LumApps I take AI from prototype to production end to end: multi-agent workflows on Python, LangGraph and Google ADK, with tools exposed over MCP and state streamed to the UI over AG-UI. Reps use it daily. 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day, \$1M forecast in quarterly revenue. I own the whole loop: discovery with reps and RevOps, the MCP layer over domain APIs, the eval pipelines, LangSmith tracing, verification loops, refusal patterns, and on-call. It is the pattern your JD describes, running in production today.

On the side I built Proplab, an AI-native product for property inspections and multilingual listings. Vision pipeline extracts structured signals from inspection photos, LLM agents turn those records into marketing-ready listings end to end. It is exactly the kind of manual, high-toil workflow Neho wants agents to remove, and I've already shipped it once. I also co-founded SwissNRI, an AI-native cross-border compliance product where refusal patterns and guardrails-before-features are the default because a wrong answer has real consequences. Regulated, document-heavy, Swiss data. Same discipline the JD asks for.

The shape of the role reads right to me. Zero-to-one, reports to CTO, small team, ship in weeks. I like sitting next to an advisor for an afternoon and mapping the messy human workflow. I like consuming clean API contracts and building thin, well-designed MCP wrappers on top. I like measuring effort removed, not agents shipped, and I have killed features that didn't move a metric.

I am Zurich-based, comfortable across offices, and can start soon. Happy to walk through the LumApps agent live (2-min demo: [link]

(<https://drive.google.com/file/d/1MUokeVsz9u9cIn-WN4aWgsEHaelcEBsQ/view?usp=sharing>)) whenever suits.

Thanks for reading,  
Anand Bhaskaran
