

Anand Bhaskaran × NewVest

For: John Malinovic · **Date:** 2026-08-05

Here's a 2-minute demo of my current work if it helps: [LumApps AI outbound system](#).

WHO I AM

I'm a lead AI engineer who questions every process in a company and then builds the human-in-the-loop system that replaces it. I don't think in features; I think in KPIs and top-line. Today I'm Lead AI Engineer at LumApps, where I run production multi-agent systems that are forecasting \$1M in quarterly revenue and I report directly to C-level. On the side I run Anand Creations, my forward-deployed AI practice, and I co-founded SwissNRI, an AI-native cross-border compliance product for regulated fintech. Before that, six years at Beekeeper, where I architected a \$1.5M+ revenue product used by 10M+ people and ran global on-call. MBA, based in Zurich, 13+ years shipping software.

WHAT I HEARD ON OUR CALL

- A top-50 PE basket that outperforms on a risk-adjusted basis, sold as a single product with a 10-year life.
- A launch cadence of at least two new products a year, with ETFs on the roadmap.
- Series A closed, AUM compounding fast, Series B on the horizon.
- A small team with a high bar and a big vision.

If I've misread any of that, tell me and I'll rewrite the rest.

My read: AI is what lets a small, senior team compress the private equity value chain (capital raising, due diligence, structuring, investor reporting, compliance) into one system with far more leverage per person. That's how you launch several products, an ETF included, close a Series B, and 10x AUM without 10x'ing headcount. That's the seat I want, and I'd use it to help you accelerate.

WHERE I COULD ADD THE MOST

Each of these is anchored to something I've actually shipped, not a slide.

AI-augmented fund manager due diligence, at four times analyst throughput.

- GP quarterly letters, capital calls, distributions, and PPMs get structured, queryable, and monitored for drift (returns, sector concentration, style, key-person events) the moment they land. IC memos draft themselves; the committee still decides.
- Human-in-the-loop on every write. The analyst approves, disputes, or overrides, and the system learns from each decision.
- Same shape as [AI Brain at LumApps](#): a temporal knowledge graph that unifies 5+ silos with freshness detection ([demo](#)). The thinking behind it: [Your AI Needs a Brain, Not a Better Model](#).

Product-launch velocity as AUM scales, so structuring new vehicles doesn't gate growth.

- ETFs, new vintages, tailored client solutions. Today each launch is months of structuring, legal, and comms. AI-native tooling turns it into a repeatable release with the guardrails baked in.
- The Series B story writes itself: "*we ship products at software-company velocity, not fund-house velocity.*"

- Same zero-to-one motion I ran behind Beekeeper's \$1.5M+ Incubation channel.

Investor reporting and an LP-facing product that earns larger tickets.

- Real-time exposure, look-through to underlying funds, vintage-to-date IRR, benchmark vs. underlying, in a UI both institutional and HNW investors actually open. Not another PDF portal.
- Same surface can host the educational content that today lives in seminars and calls: on-demand explainers on structure, terms, and the top-50 thesis.
- Trust compounds here, and larger checks follow trust. It's the critical wedge as you move from HNW to institutional to ETF distribution.

Internal fee, cost, and risk intelligence.

- A clear view of where the 1.6 + 6% actually goes each quarter, and which cost lines automation can cut without sacrificing quality or compliance posture.
- The Beekeeper analog: I replaced a \$337K annual vendor contract with an in-house LLM pipeline in 6 weeks. Solutions-oriented, guardrails first.

WHAT I'D LIKE TO EXPLORE

Full-time.

- **Long-term ambition:** own AI end-to-end at NewVest (Head of AI or equivalent, in time).
- **What I'm asking for today: Founding AI Engineer.** Prove out one of these wedges in the first 90 days, on your priorities, and earn the seat on outcomes.
- I'm not looking for a project. I'm looking for a company I stay at and build the AI foundation for, for years.
