Forward deployed engineer who ships production code, not just plans. I lead technical delivery of AI agent systems at LumApps end to end: discovery, architecture, full-stack build (Python, TypeScript, LangGraph, Google ADK), and production rollout, with eval pipelines that turn field signal into product decisions. I run Anand Creations on the side, my own forward deployed practice, and have taken three products from prototype to production myself in ambiguous, fast-moving environments where I own the trade-off calls. 13+ years writing and shipping production software for millions of users, staying in the code and on-call for what I build.

WORK EXPERIENCE

LumApps · Lead Software Engineer

03/2026 - Present

Python TypeScript LangGraph Google ADK MCP Vertex AI GCP Multi-Agent Systems ReAct RAG Evaluation Pipelines
LangSmith Observability On-Call Neo4j Graphiti Salesforce AG-UI FastAPI

- Built and deployed production multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI, using ReAct, self-reflection and hierarchical delegation, with tools exposed over MCP servers and agent state streamed to the UI over AG-UI. 2x open rates, 2x approved opportunities, \$1M forecast in quarterly revenue.
- Led technical discovery through production: agent architecture, eval pipelines, agent tracing (LangSmith), tool-selection tuning, and cost-per-request instrumentation, with on-call for global production systems, turning field signal into product decisions.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, conversation transcripts, product usage) into one time-aware memory every agent reads and writes, grounding RAG retrieval to cut hallucinations.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Java Python TypeScript Vue OpenAI LangChain Kubernetes AWS Kafka PostgreSQL Elastic Search ClickHouse
CrewAI Strands Agents Langfuse Claude Grafana Datadog Logz.io On-Call Jenkins GitHub Actions

- Replaced \$337K in annual vendor translation costs with an LLM pipeline built in 6 weeks (prototype to production). 12K+ assets translated, product team now iterates without external gatekeepers.
- Architected Employee Referral System end-to-end, owning discovery through production and GTM with Sales. Became the platform's top revenue channel (\$1.5M+ generated, \$500K ARR). Designed for 99.99% SLA.
- Built GenAI demo system for sales that auto-generates personalized content from Salesforce data so every pitch feels custom-built for that customer. Improved demo speed and close rates.
- Designed a distributed templating engine and reusable module framework that cut customer setup time 90% and now powers 15% of all assets on the platform (10M+ users): a building block others build on, not a one-off.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

Startup Evaluation AI Strategy Technical Mentoring Algorithmic Trading Scalability

- Evaluated 20+ startups on technical architecture, scalability, and AI readiness to inform seed-to-VC investment decisions.
- Mentored Opt Alpha on scaling high-frequency algorithmic trading systems in production.

Dronistics · Founding Engineer

08/2018 - 03/2020

Vue Java PostgreSQL Real-time Systems Flight Control APIs Logistics Optimization AWS Docker Terraform
Infrastructure as Code CI/CD

- Shipped end-to-end autonomous drone delivery platform (Vue/Java/PostgreSQL). 500+ successful deliveries, every flight a live production test for autonomous systems.
- Engineered real-time flight control APIs and logistics optimization algorithms. 40% faster deliveries, 99.5% safety record, zero incidents: calm judgment when the stakes are physical.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed engineering practice, currently the home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView). Open to forward-deployed client engagements: embedding with a team, running technical discovery, and shipping production agentic AI end to end.

- Take my own products from zero to production end to end: multi-agent systems, RAG grounding, eval pipelines, and observability, the same playbook I bring to any engagement.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform for Swiss-Indian families, replacing spreadsheets and expensive advisors. RAG-grounded assistant answers DTAA, FEMA and Swiss tax questions in plain language with citations back to the regulation; compliance-first agentic design flags risk before users file, with regulatory guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.

Proplab - AI for Real Estate · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Property inspections run on paper, clipboards, and WhatsApp photos. Built an AI-native MVP: vision models turn inspection photos into structured records; LLM agents turn those records into marketing-ready listings.

- Vision pipeline extracts structured signals (room type, condition, defects) from inspection photos; LLM agents turn those records into multilingual, marketing-ready listings end to end, zero copy-paste from photo to published listing.
