---

Dear Partners Group team,

The line "built differently to build differently" stopped me. I have been engineering, founding, and investing off the standard path for over a decade, and I stopped apologising for it years ago.

I am Lead AI Engineer at LumApps, where I own the AI stack end to end: multi-agent workflows on Python, LangGraph and Google ADK over GCP Vertex AI, tools exposed over MCP, grounded by a temporal knowledge graph on Graphiti and Neo4j that gives every agent one time-aware memory across Salesforce, HubSpot, Pendo and product data. Enterprise governance is built in from day one, not bolted on: evals, agent tracing, cost-per-request telemetry, per-agent access contracts, on-call for global production. Outcome so far: 2x open rates, 2x approved opportunities, \$1M forecast in quarterly revenue. Before that at Beekeeper I replaced a \$337K annual vendor contract with an in-house LLM pipeline in six weeks, then kept it running.

The part I do not usually put on a CV: I invest my own capital the way Partners Group invests yours. Early positions in Anthropic, OpenAI, SpaceX and Polymarket, alongside a capital-markets portfolio built to compound over decades, not quarters. I read S-1s for fun, study Ray Dalio, Warren Buffett and Charlie Munger the way most engineers study framework release notes, and spend evenings running risk optimisation and portfolio allocation with my own AI systems. I have also co-founded three companies, most recently SwissNRI, an AI-native cross-border tax and compliance platform for Swiss-Indian families. That investor lens changes how I engineer: buy-vs-build up front, kill features that will not compound, instrument every launch so we know within a week whether it is worth another dollar.

Your AI Solutions team looks like the rare seat where the AI I build talks directly to the private-markets thinking my brain already runs on. I would love the chance to talk.

Thanks for reading,

Anand Bhaskaran
