

Anand Bhaskaran

Context Engineer & AI Systems Builder / Writes Prose, Ships Code / 3× Founder / Public Portfolio

📍 Zurich, Switzerland · ✉ anandbaskaran3193@gmail.com · 📞 +41763043193 · in anandb3 · 🌐 anandbhaskaran · 🌐 anand-creations.com

3	4	10M+	\$337K
AI Products Founded	Conference Talks	Users Served	Costs Eliminated

The prose-and-code combo this role wants. At LumApps I built AI Brain: a temporal knowledge graph unifying 5+ silos into one context pipeline every agent reads and writes. At Beekeeper I shipped an AI Onboarding Specialist that guides every new signup at scale (direct analog to a Wizard-style agent), plus an LLM translation pipeline over docs-as-code (GitHub Actions + OpenAI) that replaced \$337K/yr in vendor cost. Public portfolio: blog at anand-creations.com, 4 international conference talks, articles on TowardsAI and Substack, open-source Robogen at EPFL. Opinionated on context windows, harnesses, coding agents, and MCP; author of MCP servers in production.

WORK EXPERIENCE

LumApps · Lead AI Engineer (Context & Agents) [▶ Watch demo](#) 03/2026 - Present

Python TypeScript LangGraph Google ADK MCP (Authored) AG-UI Context Pipelines Knowledge Graphs Neo4j Graphiti RAG Evaluation Pipelines LangSmith Prompt Design Coding Agents Docs-as-Code

- Designed AI Brain, a temporal knowledge graph on Graphiti/Neo4j that unifies 5+ silos (Salesforce, HubSpot, Pendo, product usage) into one time-aware context pipeline every agent reads and writes. Grounds RAG so agents stop hallucinating.
- Built and shipped production multi-agent workflows on Python, LangGraph and Google ADK. Tools exposed over MCP servers I authored, agent state streamed to the UI over AG-UI, evals + LangSmith tracing so every context decision reconstructs from the log. 2x conversions, \$1M forecast quarterly.
- Opinionated on context window management, harnesses, and coding agents. Every context change is instrumented; behavior regressions block merge.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

TypeScript Vue Node.js Java Python Kubernetes AWS OpenAI Claude LangChain CrewAI PostgreSQL Elastic Search Kafka GitHub Actions Docs-as-Code Onboarding Agents

- Built AI Onboarding Specialist that guides every new signup through setup at high-touch scale (direct analog to a Wizard-style onboarding agent). 100% of customers guided without adding headcount.
- Replaced \$337K/yr in vendor translation costs with an in-house LLM pipeline shipped in 6 weeks (GitHub Actions + OpenAI, docs-as-code). 12K+ assets translated; product team ships content in new languages without a gatekeeper.
- Designed a distributed templating engine that cut customer setup time 90% and powers 15% of all assets on the platform (10M+ users). Full-stack, Product Owner. Systems thinking end to end.
- Ran observability and global on-call across multiple codebases. Hired and mentored the AI engineering cohort; engineers now lead features independently. Got tagged by other engineers for code review.

Dronistics (EPFL spin-off) · Founding Engineer 08/2018 - 03/2020

Founding Engineer Vue Java PostgreSQL AWS Docker Terraform CI/CD Teaching Complex Systems Multidisciplinary

- Founding engineer at a startup. Shipped full stack (Vue, Java, PostgreSQL, real-time APIs, AWS/Docker/Terraform infra) from empty repo to 500+ real-world deliveries. Multidisciplinary by necessity.
- Built the operator UI and the visual materials partners saw. Explained a complex autonomous system to non-technical customers in every demo.

EPFL, Laboratory of Intelligent Systems (Robogen) · AI Research Engineer, Teaching Assistant & Open Source Maintainer 08/2016 - 03/2020

Teaching Open Source Technical Documentation C++ Python AWS Neural Networks Genetic Algorithms Webots

- Teaching Assistant for Evolutionary Robotics. Supervised 20+ master's students; taught genetic algorithms, neural controllers, and embodied learning hands-on.
- Built and open-sourced Robogen, a platform researchers and students use to design, evolve, and 3D-print real robots. Featured on the AWS Public Sector Blog.
- Wrote documentation, examples, and onboarding materials so the platform outlived my time on the team. Systems thinking about how knowledge outlives its author.

Anand Creations - AI Products, Blog & Forward Deployed Engineering · <https://anand-creations.com>06/2024 - Present

Founder & Principal Builder

Independent studio, technical blog, and home for 3 AI-native products I design, build, and ship on my own (SwissNRI, Proplab, PulseView). Public writing on context engineering, memory, and agent reliability at anand-creations.com/blog.

PulseView - Explainable AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time AI agents that generate AND justify trading signals. Live users on real-time feeds; explainability and evals baked in. Every signal shipped with the context that produced it.

Proplab - AI-Native Property Workflows · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Vision pipeline turns inspection photos into structured, queryable records; LLM agents compose multilingual listings end to end. Structured context in, natural language out.
