Dear Remote team,

I already work as a Forward Deployed Engineer, just under my own shingle. Anand Creations is my independent FDE practice: I embed with teams, run technical discovery, ship production agentic AI end to end, and hand it back with a playbook. Your Remote Build role is the same motion at a larger surface, on a platform whose thesis I already believe in.

The AI side of the role is where I spend most of my week. At LumApps I own a production multi-agent system on Python, LangGraph and Google ADK, with tools exposed over MCP servers I authored and integrations into Salesforce, HubSpot and Pendo via OAuth. Idempotent write-back with an audit log, temporal knowledge graph grounding all retrieval, evals + LangSmith tracing so every run reconstructs from its log, and on-call. 2x open rates, 2x approved opportunities, \$1M forecast quarterly. When it broke I was the one who fixed it and wrote the postmortem.

The HR / compliance side lines up specifically. Beekeeper (my prior 6 years) is a frontline workforce platform serving 10M+ users with enterprise SLA, multi-tenant SaaS, RBAC and privacy-by-design; I ran GTM launches with Sales and PM there and shipped one that became the top revenue channel (\$1.5M+, \$500K ARR). I also co-founded SwissNRI, an AI-native cross-border tax and compliance platform where "no wrong answers on regulation" is the whole product. That is the mindset Remote lives in every day.

I have been remote-first since 2018. Zurich gives me EMEA overlap and a solid US morning window. Comfortable with the ~10% travel for customer engagements, and comfortable being on-call for what I ship.

Would love to talk about the customers where you most need someone who can go from messy problem to shipped agentic system without hand-holding.

Thanks for reading,

Anand Bhaskaran
