AI Platform Engineer who ships the execution layer: production multi-agent runtime, evals gate, governance in code, and every prompt/tool call/decision logged for reconstruction. At LumApps I built the platform Sales and RevOps depend on daily: multi-agent workflows on Python and GCP Vertex AI, tools exposed over MCP servers I authored, temporal knowledge graph grounding, verification loops, cost-per-request instrumentation, and on-call for global production. Public work on agent reliability (TowardsAI, blog, 4 conference talks), 3 AI products founded solo through Anand Creations. Comfortable being the only engineer on a platform and closing architecture decisions rather than routing them.

WORK EXPERIENCE

LumApps · Lead AI Platform Engineer [▶ Watch demo](#) 03/2026 - Present

Python GCP Vertex AI LangGraph Google ADK MCP (Authored) AG-UI Multi-Agent Systems Golden Set Evals
LLM Observability LangSmith Cost-per-Request Human-in-the-Loop Governance Least-Privilege Neo4j Graphiti On-Call

- Shipped the production multi-agent platform Sales and RevOps depend on daily. Python on GCP Vertex AI, LangGraph + Google ADK runtime, tools over MCP servers I authored, agent state streamed over AG-UI. Durable state, verification loops, HITL gates before any external write. 2x conversions, \$1M forecast quarterly. Has operational history, real users, and incidents I can talk through.
- Own the evaluation layer: golden suites with behavioral assertions, judge rubrics, safety cases per agent, cost-per-request instrumentation, and LangSmith tracing so every run reconstructs from its log. No agent ships without evals; regressions block merge.
- Designed AI Brain, a temporal knowledge graph on Graphiti/Neo4j unifying 5+ silos (Salesforce, HubSpot, Pendo, product usage) into one auditable time-aware store. Least-privilege tool grants per agent, decision audit log, and API design that makes the forbidden write structurally impossible, not merely discouraged.

Beekeeper AG · Senior Software Engineer (Technical Lead) 03/2020 - 02/2026

Python TypeScript Java Kubernetes AWS Docker Terraform IaC OpenAI Claude LangChain Langfuse
GitHub Actions CI/CD PostgreSQL Elastic Search Grafana Datadog On-Call

- Replaced \$337K/yr in vendor translation costs with an in-house LLM pipeline shipped in 6 weeks (GitHub Actions + OpenAI). 12K+ assets translated; own the queue, retries, and provenance log so every translation is reconstructible.
- Built AI Onboarding Specialist and a GenAI demo generator: internal LLM-powered tools with governance built in (safe prompts, HITL review of every generated asset before send).
- Architected Employee Referral System end to end. Became the platform's top revenue channel: \$1.5M+ generated, \$500K ARR. Internal platform non-engineers (recruiters, HR) adopted voluntarily because the reports were useful and the contact was rare.
- Ran observability and global on-call (K8s, AWS, Terraform, Grafana, Datadog, Logz.io). Provisioned, deployed, and rolled back production systems end to end.

Dronistics (EPFL spin-off) · Founding Engineer 08/2018 - 03/2020

Sole Platform Engineer AWS Docker Terraform IaC Real-time Systems Safety-Critical Full-Stack Java Python

- Founding engineer at an autonomous drone startup. Sole engineer on the platform: full-stack (Vue, Java, PostgreSQL), real-time control APIs, cloud infra on AWS + Docker + Terraform from scratch. 500+ deliveries, 99.5% safety record.
- Closed every architecture decision solo. Instrumented flight ops end to end so any incident could be reconstructed from logs.

EPFL, Laboratory of Intelligent Systems (Robogen) · AI Research Engineer & Open Source Maintainer 08/2016 - 03/2020

Open Source C++ Python AWS Neural Networks Genetic Algorithms Platform Thinking

- Built and open-sourced Robogen, a platform researchers and students use to design and evolve real robots. Featured on the AWS Public Sector Blog; secured AWS Cloud Credits for Research.
- Foundation for the platform-thinking discipline (schema, distribution paths, tool inventory) I now apply to agent platforms.

Anand Creations - AI Products & Forward Deployed Engineering · <https://anand-creations.com>06/2024 - Present

Founder & Principal Builder

Independent studio and home for 3 AI-native products I design, build, and run solo (SwissNRI, Proplab, PulseView). Each ships on my own platform: registered agents, evals gate, HITL where consequential, run log for reconstruction. Self-dogfooded, harshest reviewer.

PulseView - Explainable AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time AI agents that generate AND justify trading signals. Explainability by design: if the model cannot justify the signal, it does not ship. Live users on real-time feeds; evals baked in from day one.

Proplab - AI-Native Property Workflows · <https://proplab.io>09/2025 - Present

Founder & AI Product Builder

Vision pipeline turns inspection photos into structured, queryable records; LLM agents compose multilingual listings end to end. Structured outputs and HITL review baked into the pipeline.
