Companies Founded

Applied AI engineer with a platform bias. At LumApps I built the shared AI substrate the rest of the org now builds on: AI Brain (a temporal knowledge graph every agent reads and writes), eval pipelines, LangSmith tracing, and cost-per-request instrumentation across production multi-agent workflows. 13+ years shipping backend systems and developer tooling to 10M+ users, most recently in Python and TypeScript. I think in trade-offs (reliability, latency, cost, quality, maintainability) and I like making other engineers faster more than I like shipping single features.

WORK EXPERIENCE

LumApps · Lead AI Engineer (Platform & Applied AI) [▶ Watch demo](#) 03/2026 - Present

Python TypeScript LLM Ops ML Ops GCP Vertex AI LangGraph Google ADK MCP Evaluation Pipelines LangSmith
Observability Cost & Latency Tuning RAG Vector Databases Knowledge Graphs Neo4j FastAPI

- Own the LLM Ops layer for production agents: eval pipelines, LangSmith tracing, cost-per-request instrumentation, tool-selection tuning, verification loops, and on-call. Same platform other product teams now build on top of.
- Built AI Brain, a temporal knowledge graph on Graphiti and Neo4j that unifies 5+ silos into one time-aware memory every agent reads and writes. Event-driven ingest over Pub/Sub, per-agent query and write-back contracts, freshness layer for stale-fact detection. Reusable across the platform.
- Shipped the reference multi-agent workflow (Python, LangGraph, Google ADK on GCP Vertex AI, tools over MCP, state streamed to the UI over AG-UI): 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day, \$1M forecast in quarterly revenue.

Beekeeper AG · Senior Software Engineer (Technical Lead, Platform) 03/2020 - 02/2026

Java Python TypeScript Vue Kubernetes AWS OpenAI Claude LangChain Langfuse Kafka PostgreSQL
Elastic Search ClickHouse Grafana Datadog GitHub Actions Developer Tooling On-Call

- Designed a distributed templating engine (Java, Kafka) that cut customer setup time 90% and now powers 15% of all assets for 10M+ users. Reusable platform primitive other product teams standardize on.
- Replaced a \$337K annual vendor translation contract with an in-house LLM pipeline (GitHub Actions + OpenAI APIs) shipped in 6 weeks. 12K+ assets translated, product team iterates without external gatekeepers.
- Ran observability and global on-call (Grafana, Datadog, Logz.io, Langfuse for LLM traces): logs, metrics, dashboards, alerting. Diagnosed and fixed production issues across model, service, and infra layers.
- Built and mentored the AI engineering cohort. Wrote the internal patterns, review bar, and eval tooling other engineers now reuse when shipping AI features independently.

Dronistics · Founding Engineer 08/2018 - 03/2020

Vue Java PostgreSQL AWS Docker CI/CD Real-time Systems Platform APIs

- Founding engineer for an EPFL spin-off. Shipped the full autonomous drone delivery platform (Vue/Java/PostgreSQL) that powered 500+ real-world deliveries.
- Built cloud infrastructure and CI/CD pipeline from scratch on AWS. Enterprise-grade reliability that enabled a Unilever partnership and a CES showcase.

Anand Creations - Forward Deployed AI Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal

My independent AI practice and the home for AI products I ship myself (SwissNRI, Proplab, PulseView). Same LLM Ops discipline I bring to platform work: prompt versioning, eval loops, RAG grounding, tracing, cost-per-request telemetry, whether the customer is mine or someone else's team.

PulseView - AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence for retail traders. AI agents generate AND justify trading signals from technical and news data. Explainability built into the eval stack: if the model can't justify the signal, it doesn't ship.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax and compliance platform. RAG-grounded assistant with citations back to the regulation; compliance-first agentic guardrails built before features. Zero-to-MVP in 3 months, 40% uplift in satisfaction.
