Companies Founded

Forward deployed engineer who lives inside enterprise AI systems in production. At LumApps I embed with GTM teams, surface real failure modes in multi-agent workflows, design golden datasets and LLM-as-judge evals on LangSmith, and run tight experimental loops that took open rates and approved opportunities to 2x. Prior 6 years at Beekeeper covered shipping LLM pipelines and AI features to 10M+ users with instrumentation from day one. Anand Creations is my independent forward-deployed practice. Founder-mode iteration, MBA-trained business framing, and a public writing habit (12+ articles and conference talks) that turns work into reusable research artifacts.

WORK EXPERIENCE

LumApps · Lead AI Engineer

[▶ Watch demo](#)

03/2026 - Present

Forward Deployed · Enterprise AI · Eval Design · Golden Datasets · LLM-as-Judge · Agentic Workflows · Failure Mode Analysis · Data Curation · LangSmith · Python · GCP · Vertex AI · LangChain · LangGraph · Google ADK · MCP · RAG · Neo4j · Graphiti

- Own the eval and data layer for a production multi-agent system: golden datasets, LLM-as-judge scorers on LangSmith, regression checks on every prompt change, cost-per-request telemetry. Failure modes surfaced from production get formalized into datasets that target the exact weakness.
- Designed AI Brain, a temporal knowledge graph on Graphiti and Neo4j unifying 5+ enterprise silos (Salesforce, HubSpot, Pendo, transcripts, product usage) into one time-aware source. Freshness layer flags stale facts before they hallucinate downstream.
- Run tight experimental loops with SMEs and stakeholders to validate hypotheses and quantify improvements: 2x open rates, 2x approved opportunities, 2 to 3 hours saved per rep per day, \$1M/quarter forecast revenue.

Beekeeper AG · Senior Software Engineer (Technical Lead)

03/2020 - 02/2026

Enterprise AI · LLM Pipelines · Dataset Design · Evaluation · Python · OpenAI · Claude · LangChain · Langfuse · PostgreSQL · ClickHouse · Elastic Search · AWS · Kubernetes · Grafana · Datadog

- Replaced \$337K in annual vendor translation costs with an in-house Python + OpenAI pipeline shipped in 6 weeks. Diagnosed failure modes across content types, iterated dataset and prompt design per locale, shipped with quality guardrails.
- Built AI Onboarding Specialist: prompt-driven guide that turns new-signup context into personalized, high-touch setup. Instrumented for real-world quality so every regression showed up in the dashboard, not the customer.
- Led Search Platform revamp across 3 teams: redesigned indexing and ranking (Elastic Search, ClickHouse) driven by measured relevance failures, not intuition. Measurable engagement lift for 10M+ users.
- Ran observability and on-call for global production LLM systems (Grafana, Datadog, Logz.io, Langfuse): prompt-level traces, cost dashboards, drift alerts. Built the lightweight tooling that made rapid iteration safe.

Tenity · Startup Mentor & Technology Evaluation Panelist

06/2024 - Present

AI Advisory · Eval Design Review · Agentic Systems · Startup Evaluation · Cross-functional

- Evaluated 20+ startups on architecture, scalability, and AI readiness for seed-to-VC investment decisions. Decision-oriented analysis, presented to investment committees.
- Advised portfolio founders on eval design, agentic workflow choices, and translating operational issues into structured research problems.

EPFL, Laboratory of Intelligent Systems (Robogen) · AI Research Engineer

08/2016 - 03/2020

AI Research · Neural Networks · Genetic Algorithms · Evolutionary AI · Open Source Research · C++ · Python · AWS

- Engineered Robogen, an open-source platform for co-evolution of robot bodies and brains via genetic algorithms. Foundational optimization, search, and fitness-landscape work that underpins how I approach eval and iteration today.
- Migrated the simulation pipeline to AWS for large-scale parallel evolution runs. Secured AWS Cloud Credits for Research; work featured on the AWS Public Sector Blog.
- Teaching Assistant for Evolutionary Robotics at EPFL. Supervised 20+ master's students through hands-on projects in genetic algorithms, neural controllers, and embodied AI.

Anand Creations - Forward Deployed Engineering Practice · <https://anand-creations.com>06/2024 - Present

Founder & Principal Forward Deployed Engineer

Independent forward deployed practice: embed with a team, run technical discovery, surface real failure modes in live AI workflows, and ship the fix with instrumentation. Home for the AI products I design, build, and run on my own (SwissNRI, Proplab, PulseView), each a live testbed for eval + agentic patterns.

PulseView - Explainable AI Market Intelligence · <https://pulse-view.anand-creations.com>05/2025 - Present

Founder & Builder

Real-time market intelligence platform for retail traders. AI agents generate AND justify trading signals with explainability built in: if the model can't explain the signal, it doesn't ship. Every signal is a labelled example for future eval.

SwissNRI - AI Cross-border Fintech · <https://www.swissnri.com>01/2024 - Present

Co-Founder & Technical Lead

AI-native cross-border tax platform for Swiss-Indian families. Ran discovery with real users, built RAG-grounded assistant answering DTAA, FEMA and Swiss tax questions with citations back to the regulation. Zero-to-MVP in 3 months, 40% uplift in satisfaction from feedback-driven iteration.
