Guidelines for usage of the report

This profile summarizes the results of the questionnaire ADEPT-15, mapped onto the UBS competency model, alongside any ability tests which you recently have completed. The report outlines your strengths and development needs. It focuses on the most significant results. Your answers have been compared with a large group of persons with a similar professional background. On the basis of this comparison a benchmark profile is generated indicating which strengths you can build on in comparison to others, and which areas you need to take care of to ensure long-term professional success.

The aim of the report is to give you ideas for your professional and personal development. Of course, your personal development needs depend on your ambitions. Not every competency has the same importance for all positions. When reading the report, please keep in mind that all results are based on your questionnaire answers.

A successful development process consists of two essential components. The first component is to understand the steps and measures that need to be taken to change one's own behavior. The second component is the actual training process, i.e. learning new behaviors, abilities or attitudes in different situations and settings. Only the combination of both components will lead to successful and permanent change.

When you ask successful managers about what contributed most to their own professional and personal development, almost all will mention significant challenges and hardships in their career. You tend to learn most intensively when you are forced to do so by unusual circumstances, when you are urged to leave your comfort zone and try new behaviours and approaches.

ADEPT-15 Behavioral Results

Things you can build upon

Others see you as a sincere person who tends to be open and honest with others. As a person who is not consistently motivated by achieving social status, you tend to hesitate to take credit for successes and often recognize those around you instead. You may not advocate for your interests often, however, especially if it requires political maneuvering.

You are a calming force during times of stress and can use your composure to approach situations rationally without getting overly emotional. You are effective at concealing your emotions when needed, however, this may make you appear apathetic or difficult to read by others. You tend to focus on the facts and rationality of the situation and are less likely to react on sheer emotion.

People see you as a socially confident individual who is willing to share thoughts and be assertive in group settings. As such, you are generally opinionated and competitive. You are a persuasive individual that welcomes debate and is willing to advocate for unpopular decisions.

Things you need to be aware of

You strike a good balance between taking on leadership roles and serving as a team player, providing a good example for others to follow and providing direct authority when necessary. You thrive when leading smaller teams and do not have an overly strong motivation for accumulating authority and influence. When difficult situations arise, you are willing to let others take the lead.

While you find work to be important, you do not let work consume your personal life. Instead of seeking promotions, you focus more on enjoying your work and being good at what you do. You prefer work objectives that are achievable, and you may be less proactive in managing your own career goals.

You are a self-driven individual who prefers to work independently. When encountering problems, you tend to try to work through these issues yourself, rather than seek out others for help. Your self-reliance allows you to be in control of your work, yet others around you may appreciate a more collaborative approach on interdependent tasks.

Inductive Reasoning clx

What does this test measure?

The task is to find out rules and interrelations in a given pattern and to apply these rules to the following ones. Therefore, the test measures the ability to draw inductive logical conclusions. High scores indicate the ability to analyse information and data bases and to recognise the rules behind them.

How to interpret your result

Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:

It is **as easy** for you as for other participants to handle the tasks in this test successfully.

What is your processing style like?

In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 17

Number of questions correctly answered (accuracy): 17

Your processing style can be characterised as follows:

Your completion of the test was **quite fast**, this means that you completed approximately as many tasks as most other participants. At the same time you were **extremely accurate** which means that compared to other participants, you answered more tasks correctly.

Verbal Reasoning

What does this test measure?

The task is to draw logical conclusions from complex verbal information. In addition, this test measures the ability to purposefully retrieve the relevant information from a large amount of data. High scores indicate the ability to accommodate complex information under time pressure fast and efficiently and to distinguish it from irrelevant information.

How to interpret your result

Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:

Compared to other participants, it is **easier** for you to handle the tasks in this test successfully.

What is your processing style like?

In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 10

Number of questions correctly answered (accuracy): 8

Your processing style can be characterised as follows:

Your completion of the test was **quite fast**, this means that you completed approximately as many tasks as most other participants. At the same time you were **extremely accurate** which means that compared to other participants, you answered more tasks correctly.
